Smart Home Usa:

Der Einfluss des wahrgenommenen Alterns auf die Akzeptanz von Smart-Home-Technologien Eichner, Andreas, 2021-08-31 Die bis dato eher verhaltene Nachfrage nach Smart Home Systemen gibt Anlass zu der Frage nach den maßgeblichen Adoptionsbarrieren. In Anbetracht des potentiellen Nutzens dieser Technologien für das Leben der Bewohner besonders auch im fortschreitenden Alter besteht darüber hinaus Forschungsbedarf, ob und in welcher Art sich das Altern auf die Technologieakzeptanz auswirkt. Insbesondere sind auf subjektiver Wahrnehmung basierende Alterskonstrukte bisher kaum im Zusammenhang mit der Technologieadoption untersucht worden. Die Arbeit befasst sich mit den Determinanten der Akzeptanz von Smart Home Anwendungen seitens potentieller Benutzer anhand populärer Theorien und Modelle zum individuellen Adoptionsverhalten und mit Blick auf die Einflusswirkung des chronologischen Alters bzw. des subjektiv empfundenen Alterns. Das gewählte Untersuchungsmodell basiert auf dem in der wissenschaftlichen Forschung weit verbreiteten und empirisch bewährten Technology Acceptance Model (Davis, Bagozzi, Warshaw, 1989). Zusätzlich werden alternativ externe Variablen in Form des chronologischen Alters bzw. der Future Time Perspective (Carstensen, Lang, 1996) einbezogen, um insbesondere die Wirkung auf den wahrgenommenen Nutzwert und die empfundene Einfachheit der Nutzung von Hausautomatisierung zu untersuchen. Betrachtet werden zudem Mediator- und Moderatoreffekte hinsichtlich der nachgelagerten Einstellungsbildung und Bernahmeintention. Die Ergebnisse stützen die Hypothese, dass die subjektive Future Time Perspective mit Blick auf die im Leben verbleibenden Möglichkeiten einen größeren Erklärungsbeitrag zur individuellen Adoption von Smart Home Systemen leisten kann als das chronologische Alter.

Quantitative Logic and Soft Computing Bing-Yuan Cao,Shuili Chen,Guojun Wang,Sicong Guo,2010-10-14 Admittedly the notion intelligence or intelligent computing has been around us for several decades implicitly indicating any non conventional methods of solving complex system problems such as expert systems and intelligent control techniques that mimic human skill and replace human operators for automation Various kinds of intelligent methods have been suggested phenomenological or ontological and we have been witnessing quite successful applications On the other hand Soft Computing Techniques is the concept coined by Lot Zadeh referring to a set of approaches of computing which parallels the remarkable ability of the human mind to reason and learn in an environment of uncertainty imprecision and partial truth Such a notion is well contrasted with the conventional binary logic based hard computing and has been effectively utilized with the guiding principle of exploiting the tolerance for uncertainty imprecision and partial truth to achieve tractability business and low solution cost The soft computing techniques are often employed as the technical entities in a tool box with tools being FL ANN Rough Set GA etc Based on one's intuition and experience an engineer can build and realize human like systems by smartly mixing proper technical tools effectively and efficiently in a wide range of fields For some time the soft computing techniques are also referred to as intelligent computing tools

Threshold Heather Suzanne Woods, 2024-05-15 Smart homes are domestic spaces outfitted with networked technology made by brands like Google Facebook Amazon and Apple However Silicon Valley purveyors are not the only important actors in smart home development Appliance makers logistics companies health and wellness conglomerates insurance companies and security franchises are all betting on the smart home in an economy that puts a premium on data Together major players in the smart home space have successfully attracted the attention and pocketbooks of millions of households by touting the virtues of ambient networked technologies as an upgrade to modern domestic life If industry predictions hold nearly half of American houses will be smart by 2024 Yet what it means to be smart is still unsettled Threshold asks and answers the question How do smart homes communicate cultural values about the role of technology in the 21st century Answering this question is time sensitive as the coming years will determine how smart homes are configured who has access to them and what they mean to their

owners policy makers technology companies and others invested in these domestic digital platforms The consequences of these decisions are significant because they impact both smart home residents and society at large At present much of the research on smart homes caters either to industry experts or scientists and engineers This literature often describes or evaluates the technical capacities of the smart home or focuses on user interface and design Instead Heather Woods argues we need a sustained cultural analysis of smart homes that considers the socio technical variables gender class income disparity race criminal justice the housing market and the future of both labor and domesticity that give the smart home meaning Threshold takes up this challenge from a rhetorical perspective arguing that smart homes are lived material embodiments of the digital cultures in which they are imagined built and used Those considerations more often than not are relegated to secondary considerations when in truth they are the most pervasive and consequential factors affecting anyone participating in a smart home ecosystem Woods argues that smart homes are spatial manifestations of a phenomenon called living in digitality a cultural condition whereby users engage with technology at every moment of every day Using extensive fieldwork at smart homes throughout the USA Woods traces how smart homes urge ubiquitous computing as a normalized daily practice readying domestic spaces and their occupants for an increasingly transactional digital future that is largely controlled by corporate interests Threshold advances knowledge in three ways by 1 Offering definitional tools for identifying and evaluating immersive technologies including but not limited to the smart home 2 Identifying three distinct configurations of the smart home according to their domestic and technological functions 3 Demonstrating the productive capacity of smart homes and smart devices to influence social life The book highlights the rhetorical force of smart domesticity for rhetorical scholars digital humanists political scientists critical theorists policy makers and residents or prospective residents of smart homes Ultimately Threshold serves as a toolkit for recognizing and responding to the persistent encroachment of digital technologies in all parts of our lives
