The Economics of Inflation - A Study of Currency Depreciation in Post War Germany Costantino Bresciani-Turroni, Lionel Robbins, 2011-03-23 The depreciation of the mark of 1914 23 which is the subject of this work is one of the outstanding episodes in the history of the twentieth century Not only by reason of its magnitude but also by reason of its effects it looms large on our horizon It was the most colossal thing of its kind in history and next probably to the Great War itself it must bear responsibility for many of the political and economic difficulties of our generation It destroyed the wealth of the more solid elements in German society and it left behind a moral and economic disequilibrium apt breeding ground for the disasters which have followed Hitler is the foster child of the inflation The financial convulsions of the Great Depression were in part at least the product of the distortions of the system of international borrowing and lending to which its ravages had given rise If we are to understand correctly the present position of Europe we must not neglect the study of the great German inflation If we are to plan for greater stability in the future we must learn to avoid the mistakes from which it sprang There is another reason why the history of this episode is peculiarly significant to students of the social sciences Accidents to the body politic like accidents to the physical body often permit observations of a kind which would not be possible under normal conditions In peaceful times we may speculate concerning the consequences of violent change But we are naturally precluded from verifying our conclusions we cannot upset the smooth current of things for the advancement of abstract knowledge But when disturbance takes place it is sometimes possible to snatch good from evil and to obtain insight into the working of processes which are normally concealed No doubt there are dangers here We must not ignore the possibility that the processes thus revealed are themselves abnormal we must not infer for instance that propositions which apply to large inflations necessarily apply without modification to small inflations But the dangers are clear it is net difficult to keep them in mind and to guard against them And the opportunities of fruitful research are enormous In this matter of the depreciation of the mark there is hardly any branch of the theory of economic dynamics which is not illuminated by examination of its grim events For both these reasons therefore I hope that this book will obtain a wide circulation among the English speaking public **British**
