Practice and Automatization in Second Language Research Yuichi Suzuki, 2023-08-28 Practice is a recurring and popular theme in language education. However, the concepts of practice and automatization have recently received renewed theoretical and practical interest and are increasingly being explored from the skill acquisition theory and cognitive psychology perspectives. In this volume, leading scholars discuss the optimal types, amounts, and schedules of practice for specific language structures and skills, as well as for various types of learners and learning contexts to facilitate second language development. They illuminate how practice is instantiated for specific groups of teachers and learners in diverse institutionalized contexts such as foreign language curriculum development, intelligent computer-assisted language learning systems, task-based language teaching, and study abroad. Furthermore, original methodological syntheses of extant research on practice and automatization are presented along with guides for conducting empirical research on these topics. *Practice and Automatization in Second Language Research: Perspectives from Skill Acquisition Theory and Cognitive Psychology* is a valuable resource and reference for graduate students and researchers in the field of SLA and applied linguistics.

Reading Randomised Controlled Trials Robert Savage, Amy Fox, Anneka Dawson, Helen Gray, Clare Huxley, 2025-03-03 In early 2021, the Flexible Phonics reading intervention, a large-scale randomised controlled trial, took place in 118 schools in England and involved nearly 3,000 children. This study aimed to provide valuable insights into the success of largely school-based education trials. The Flexible Phonics trial proved to be not only an important experiment in improving children's literacy but also a case study in which the methodology of single randomised controlled trials in education can be considered. *Reading Randomised Controlled Trials* investigates the complexities of conducting randomised controlled trials in the field of education and how they can be seen as a cultural activity. The book emphasises the human operations, decision making, and actions that drive such trials, which are often overlooked in published reports. Through the case study of Flexible Phonics, the book highlights the key differences between scaled educational trials and other types of trials, such as pharmaceutical trials. The additional focus on early childhood literacy is of significant educational importance, particularly in the context of UK school partial closures in 2020 and 2021 during the COVID-19 pandemic. *Reading Randomised Controlled Trials* is ultimately a unique resource on the implementation of randomised controlled trials in authentic school contexts and for the sustained improvement of practice in education.

Improving Learning Steven Higgins, 2018-10-11 *Improving Learning* centres on the findings from different areas of education-focused research that support evidence-informed teaching and contextualises these results to optimise decision making in schools. It also describes the origins and principles of meta-analysis in education and how this identifies the successes in improving learning in classrooms. Moreover, it explains the thinking behind the Teaching and Learning Toolkit and similar approaches which seek a big picture overview of research findings. The advantages and disadvantages of this approach are explored with practical examples. Additionally, it identifies the issues in

using research evidence in education and the steps that can be taken to improve this It is not a manual on how to conduct a meta analysis instead the focus is on developing understanding of the approach in order to present its strengths and weaknesses This understanding can advance critical engagement and effective use to improve educational outcomes for children and young people The Importance of Literacy United States.
