Programming And Meta Programming In Scheme:

Programming and Meta-Programming in Scheme Jon Pearce,1998 By now Scheme is a well established programming language and is finding increasing popularity in programming courses for undergraduates Its expressive capabilities are matched by a simplicity of language and ease of use which have made its adherents disciples This textbook provides a comprehensive first course in Scheme and covers all of its major features abstraction functional programming data types recursion and semantic programming Although the primary goal of this text is to teach students to program in Scheme it will be suitable for any student studying a general programming principles course Each chapter is divided into three sections core appendix and problems Most essential topics are covered in the core section but it is assumed that most students will read the appendices and solve most of the problems Nearly all of the problems require students to write short Scheme procedures As well as providing a thorough grounding in Scheme the author discusses in depth different programming paradigms An important theme throughout is that of meta programming the perspective that programs themselves can be treated as data and hence can be analyzed and modified as objects This provides insight into topics such as type checking and overloading which might otherwise be missed **Meta-Programming and Model-Driven Meta-Program Development** Vytautas Štuikys,Robertas Damaševičius,2012-08-21 Meta Programming and Model Driven Meta Program Development Principles Processes and Techniques presents an overall analysis of meta programming focusing on insights of meta programming techniques heterogeneous meta program development processes in the context of model driven feature based and transformative approaches The fundamental concepts of meta programming are still not thoroughly understood in this well organized book divided into three parts the authors help to address this Chapters include Taxonomy of fundamental concepts of meta programming Concept of structural heterogeneous meta programming based on the original meta language Model driven concept and feature based modeling to the development process of meta programs Equivalent meta program transformations and metrics to evaluate complexity of feature based models and meta programs Variety of academic research case studies within different application domains to experimentally verify the soundness of the investigated approaches Both authors are professors at Kaunas University of Technology with 15 years research and teaching experience in the field Meta Programming and Model Driven Meta Program Development Principles Processes and Techniques is aimed at post graduates in computer science and software engineering and researchers and program system developers wishing to extend their knowledge in this rapidly evolving sector of science and technology
