Phonology Theory And Analysis Introduction To The Study Of Phonology:

Generative Phonology Nigel Love, 1981-01-01 This study is a discussion of rather than a contribution to generative phonology The central question posed is Does linguistic theory provide a basis for choosing between competing grammars that is an evaluation procedure for grammars If so then what is its form If not then how are we to interpret controversies between linguists as to the relative merits of competing grammars These issues will be discussed in relation to a particular problem of evaluation in the treatment of the morphonology of final segments in Modern French *Principles of Radical CV Phonology* van der Hulst Harry van der Hulst, 2020-07-06 Harry van der Hulst s model of Radical CV Phonology has roots in the framework of Dependency Phonology but proposes a rather different geometry which reduces the set of unary elements to just two C and V The model explains the phonological distinctions that function contrastively in the world s languages rather than presenting it as a random list Van der Hulst shows how this model accounts for a number of central claims about markedness and minimal specification He explains how the representational system accounts for phonological rules and shows how this theory can be applied to sign language structure Through comparison to other models he also provides insight into current theories of segmental structure commonly used feature systems as well as recurrent controversies
