*Reading, Writing, and Arithmetic* James M. Schofield,2011 Mathematics and language have been treated as two exclusive domains in education yet a growing amount of evidence indicates that language ability correlates with mathematical achievement and that incorporating literacy in the mathematics classroom will actually enhance achievement This thesis synthesizes research in

the literature that ranges from 1980 to 2011 and contains mostly empirical studies of the relationship between literacy and mathematics. The purpose of this thesis is to analyze whether different modes of communication reading writing and spoken when incorporated in the classroom will improve mathematics achievement. Further the different modes of communication are compared to evaluate if one mode seems to more strongly affect learning. This research shows that literacy ability has large effects on mathematics in general. Writing in the classroom may have the strongest effect on conceptual understanding. Reading seems to correlate highly with math achievement. Finally elicited self explanations have been shown to increase mathematical understanding leaf 4
