Readings in artificial intelligence Bonnie Lynn Webber,1981 **Readings in Artificial Intelligence** Bonnie Lynn Webber,Nils J. Nilsson,1981 The purpose of this collection is to make accessible in one place a number of the seminal research papers in the field of artificial intelligence These papers cover a wide variety of topics some are theoretical and some experimental As many of the papers included here are difficult to find elsewhere having originally been published in conference proceedings or journals that are no longer in print the researcher or student will find this volume a valuable sourcebook of fundamental AI research The editors have added useful introductions to each section and a comprehensive subject index

Readings in Artificial Intelligence and Databases John Mylopoulos,Michael L. Brodie,2014-06-28 The interaction of database and AI technologies is crucial to such applications as data mining active databases and knowledge based expert systems This volume collects the primary readings on the interactions actual and potential between these two fields The editors have chosen articles to balance significant early research and the best and most comprehensive articles from the 1980s An in depth introduction discusses basic research motivations giving a survey of the history concepts and terminology of the interaction Major themes approaches and results open issues and future directions are all discussed including the results of a major survey conducted by the editors of current work in industry and research labs Thirteen sections follow each with a short introduction Topics examined include semantic data models with emphasis on conceptual modeling techniques for databases and information systems and the integration of data model concepts in high level data languages definition and maintenance of integrity constraints in databases and knowledge bases natural language front ends object oriented database management systems implementation issues such as concurrency control and error recovery and representation of time and knowledge incompleteness from the viewpoints of databases logic programming and AI

Readings in Machine Learning Jude W. Shavlik,Thomas Glen Dietterich,1990 The ability to learn is a fundamental characteristic of intelligent behavior Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s The 1980s saw tremendous growth in the field and this growth promises to continue with valuable contributions to science engineering and business **Readings in Machine Learning** collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn The editors in cooperation with a group of expert referees have chosen important papers that empirically study theoretically analyze or psychologically justify machine learning algorithms The papers are grouped into a dozen categories each of which is introduced by the editors

Readings from AI Magazine Robert Englemore,1988 **An Introduction to Artificial Intelligence** Kenneth H. Rose,1985 *Readings in Artificial Intelligence and Software Engineering* Charles Rich,Richard C. Waters,2014-06-28 **Readings in Artificial Intelligence and Software Engineering** covers the main techniques and application of artificial intelligence and software engineering The

ultimate goal of artificial intelligence applied to software engineering is automatic programming Automatic programming would allow a user to simply say what is wanted and have a program produced completely automatically This book is organized into 11 parts encompassing 34 chapters that specifically tackle the topics of deductive synthesis program transformations program verification and programming tutors The opening parts provide an introduction to the key ideas to the deductive approach namely the correspondence between theorems and specifications and between constructive proofs and programs These parts also describes automatic theorem provers whose development has been designed for the programming domain The subsequent parts present generalized program transformation systems the problems involved in using natural language input the features of very high level languages and the advantages of the programming by example system Other parts explore the intelligent assistant approach and the significance and relation of programming knowledge in other programming system The concluding parts focus on the features of the domain knowledge system and the artificial intelligence programming Software engineers and designers and computer programmers as well as researchers in the field of artificial intelligence will find this book invaluable
