Readings in Qualitative Reasoning About Physical Systems Daniel S. Weld, Johan De Kleer, 2013-09-17 Readings in Qualitative Reasoning about Physical Systems describes the automated reasoning about the physical world using qualitative representations This text is divided into nine chapters each focusing on some aspect of qualitative physics The first chapter deal with qualitative physics which is concerned with representing and reasoning about the physical world The goal of qualitative physics is to capture both the commonsense knowledge of the person on the street and the tacit knowledge underlying the quantitative knowledge used by engineers and scientists The succeeding chapter discusses the qualitative calculus and its role in constructing an envisionment that includes behavior over both mythical time and elapsed time These topics are followed by reviews of the mathematical aspects of qualitative reasoning history based simulation and temporal reasoning as well as the intelligence in scientific computing The final chapters are devoted to automated modeling for qualitative reasoning and causal explanations of behavior These chapters also examine the qualitative kinematics of reasoning about shape and space This book will prove useful to psychologists and psychiatrists

Qualitative Reasoning about Physical Systems Daniel G Bobrow,2012-12-02 This volume brings together current work on qualitative reasoning Its publication reflects the maturity of qualitative reasoning as a research area and the growing interest in problems of reasoning about physical systems The papers present knowledge bases for a number of very different domains including heat flow transistors and digital computation A common theme of all these papers is explaining how physical systems work An important shared criterion is that the behavioral description must be compositional that is the description of a system s behavior must be derivable from the structure of the system This material should be of interest to anyone concerned with automated reasoning about the real physical world

Artificial Intelligence in Real-Time Control 1992 M.G. Rodd,H.B. Verbruggen,2014-06-28 The symposium had two main aims to investigate the state of the art in the application of artificial intelligence techniques in real time control and to bring together control system specialists artificial intelligence specialists and end users Many professional engineers working in industry feel that the gap between theory and practice in applying control and systems theory is widening despite efforts to develop control algorithms Papers presented at the meeting ranged from the theoretical aspects to the practical applications of artificial intelligence in real time control Themes were the methodology of artificial intelligence techniques in control engineering the application of artificial intelligence techniques in different areas of control and hardware and software requirements This symposium showed that there exist alternative possibilities for control based on artificial intelligence techniques

Artificial Intelligence in Design '92 John S. Gero,2012-12-06 Design has now become an important research topic in engineering and architecture Design is one of the keystones to economic competitiveness and the fundamental precursor to manufacturing The development of computational models founded on the artificial intelligence paradigm has provided an impetus for current design research This volume contains contributions from the Second International Conference on Artificial Intelligence in Design held in June 1992 in Pittsburgh They represent the state of the art and the cutting edge of research and development in this field They are of particular interest to researchers developers and users of computer systems in design This volume demonstrates both the breadth and depth of artificial intelligence in design and points the way forward for our understanding of design as a process and for the development of computer based tools to aid designers

Artificial Intelligence in Perspective Daniel Gureasko Bobrow,1994 This major collection of short essays reviews the scope and progress of research in artificial intelligence over the past two decades Seminal and most cited papers from the journal Artificial Intelligence are revisited by the authors who describe how their research has been developed both by themselves and by others since the journals first publication The twenty eight papers span a wide variety of domains including truth maintainance systems and qualitative process theory chemical structure analysis diagnosis of faulty circuits and

understanding visual scenes they also span a broad range of methodologies from AI's mathematical foundations to systems architecture. The volume is dedicated to Allen Newell and concludes with a section of fourteen essays devoted to a retrospective on the strength and vision of his work.

Readings in Fuzzy Sets for Intelligent Systems Didier J. Dubois, Henri Prade, Ronald R. Yager, 2014-05-12. *Readings in Fuzzy Sets for Intelligent Systems* is a collection of readings that explore the main facets of fuzzy sets and possibility theory and their use in intelligent systems. Basic notions in fuzzy set theory are discussed along with fuzzy control and approximate reasoning. Uncertainty and informativeness, information processing and membership cognition, neural networks and learning are also considered. Comprised of eight chapters, this book begins with a historical background on fuzzy sets and possibility theory, citing some forerunners who discussed ideas or formal definitions very close to the basic notions introduced by Lotfi Zadeh in 1978. The reader is then introduced to fundamental concepts in fuzzy set theory, including symmetric summation and the setting of fuzzy logic, uncertainty and informativeness, and fuzzy control. Subsequent chapters deal with approximate reasoning, information processing, decision and management sciences, and membership cognition, neural networks, and learning. Numerical methods for fuzzy clustering are described, and adaptive inference in fuzzy knowledge networks is analyzed. This monograph will be of interest to both students and practitioners in the fields of computer science, information science, applied mathematics, and artificial intelligence.

G. Tzafestas, Nour-Eddine Radhy, 1992. Ample information reflecting the state of the art of the field of mathematics applied to the analysis and design of process control is presented in this volume. It includes recent results concerning new methodologies applied to technological systems as well as non-conventional control techniques and the presentation of significant examples of implementation. R. D. and Research laboratory participants, postgraduate students, and engineers will all find this book to be invaluable.

Bonsangue, Stefan Hallerstede, Michael Leuschel, 2010-11-11 All modern industries rely on large and complex software systems In order to construct such large systems in a systematic manner the focus of the development methodologies has switched in the last two decades from functional to structural issues Formal methods have been applied successfully to the verification of medium sized programs in protocol and hardware design However their application to the development of large systems requires a greater emphasis on specification modeling and validation techniques supporting the concepts of reusability and modifiability and their implementation in new extensions of existing programming languages like Java This state of the art survey presents the outcome of the 8th Symposium on Formal Methods for Components and Objects held in Eindhoven The Netherlands in November 2009 The volume contains 17 revised contributions submitted after the symposium by speakers from each of the following European IST projects the IST FP6 project BIONETS on biologically inspired services evolution for the pervasive age the IST FP7 project COMPAS on compliance driven models languages and architectures for services the IST FP6 project CREDO on modelling and analysis of evolutionary structures for distributed services the IST FP7 DEPLOY on industrial deployment of advanced system engineering methods for high productivity and dependability the IST FP7 project HATS on highly adaptable and trustworthy software using formal methods the IST FP7 project INESS on integrated European railway signalling system the IST FP7 project MOGENTES on model based generation of tests for dependable embedded systems the IST FP6 project PROTEST on property based testing and the IST FP7 project QUASIMODO on quantitative system properties in model driven design of embedded systems Prognosen in der Klimatologie Peter Frankenberg, 1990 Proceedings of the 1991 Conference Lawrence Birnbaum, 1991 This volume contains the papers presented at the fifth International Conference on the Learning Sciences formerly the International Conference on Artificial Intelligence and Education As the change in name signifies a strong effort has been made to open the conference to a broader audience including educational and cognitive psychologists interested in the problems of teaching and learning and software designers interested in building systems to facilitate teaching and learning The issues involved in artificial intelligence AI and education are of interest to a broad spectrum of researchers in education psychology and software systems As in previous years there are papers on tools and authoring systems teaching architectures student modelling interfaces simulation and empirical evaluation Science education especially biology mathematics and physics receives attention as do language and writing skills Problems of corporate and industrial training are also addressed Cooperative and collaborative learning involving groups of students is an important theme of many papers Questioning and story telling are taken as central to teaching and learning as are the promotion of development and use of cognitive strategies A number of papers address the question of how computer systems can aid teachers in such tasks as lesson
