Probability In Banach Spaces 7 Proceedings Progress In Probability 21:

The Dynkin Festschrift Mark I. Freidlin, 2012-12-06 Onishchik A A Kirillov and E B Vinberg who obtained their first results on Lie groups in Dynkin's seminar. At a later stage the work of the seminar was greatly enriched by the active participation of I. I. Pyatetskii Shapiro. As already noted, Dynkin started to work in probability as far back as his undergraduate studies. In fact his first published paper deals with a problem arising in Markov chain theory. The most significant among his earliest probabilistic results concern sufficient statistics. In 15 and 17 Dynkin described all families of one dimensional probability distributions admitting non trivial sufficient statistics. These papers have considerably influenced the subsequent research in this field. But Dynkin's most famous results in probability concern the theory of Markov processes. Following Kolmogorov, Feller, Doob and Ito, Dynkin opened a new chapter in the theory of Markov processes. He created the fundamental concept of a Markov process as a family of measures corresponding to various initial times and states and he defined time homogeneous processes in terms of the shift operators t . In a joint paper with his student A. *Seminar on Stochastic Processes, 1991* E. Cinlar, K.L. Chung, M. Sharpe, 2012-12-06 The 1991 Seminar on Stochastic Processes was held at the University of California Los Angeles from March 23 through March 25, 1991. This was the eleventh in a series of annual meetings which provide researchers with the opportunity to discuss current work on stochastic processes in an informal and enjoyable atmosphere. Previous seminars were held at Northwestern University, Princeton University, the University of Florida, the University of Virginia, the University of California San Diego and the University of British Columbia. Following the successful format of previous years, there were five invited lectures. These were given by M. Barlow, G. Lawler, P. March, D. Stroock, M. Talagrand. The enthusiasm and interest of the participants created a lively and stimulating atmosphere for the seminar. Some of the topics discussed are represented by the articles in this volume. P. J. Fitzsimmons, T. M. Liggett, S. C. Port, Los Angeles, 1991. In Memory of Steven Orey. M. CRANSTON. The mathematical community has lost a cherished colleague with the passing of Steven Orey. This unique and thoughtful man has left those who knew him with many pleasant memories. He has also left us with important contributions in the development of the theory of Markov processes. As a friend and former student, I wish to take this chance to recall to those who know and introduce to those who do not a portion of his lifework.

Stochastic Analysis and Related Topics H. Kőrezlioglu, A.S. Üstünel, 2012-12-06 This volume contains a large spectrum of work: super processes, Dirichlet forms, anticipative stochastic calculus, random fields and Wiener space analysis. The first part of the volume consists of two main lectures given at the third Silivri meeting in 1990: 1. Infinitely divisible random measures and superprocesses by D. A. Dawson; 2. Dirichlet forms on infinite dimensional spaces and applications by M. Rockner. The second part consists of recent research papers all related to Stochastic Analysis motivated by stochastic partial differential equations, Markov fields, the Malliavin calculus and the Feynman path integrals. We would herewith like to thank the ENST for its material support for the above mentioned meeting as well as for the initial preparation of this volume and to

our friend and colleague Erhan Qmlar whose help and encouragement for the realization of this volume have been essential

Dudley,M.G. Hahn,James Kuelbs,1992-10 Probability limit theorems in infinite dimensional spaces give conditions under which convergence holds uniformly over an infinite class of sets or functions Early results in this direction were the Glivenko Cantelli Kolmogorov Smirnov and Donsker theorems for empirical distribution functions Already in these cases there is convergence in Banach spaces that are not only infinite dimensional but nonseparable But the theory in such spaces developed slowly until the late 1970 s Meanwhile work on probability in separable Banach spaces in relation with the geometry of those spaces began in the 1950 s and developed strongly in the 1960 s and 70 s We have in mind here also work on sample continuity and boundedness of Gaussian processes and random methods in harmonic analysis By the mid 70 s a substantial theory was in place including sharp infinite dimensional limit theorems under either metric entropy or geometric conditions Then modern empirical process theory began to develop where the collection of half lines in the line has been replaced by much more general collections of sets in and functions on multidimensional spaces Many of the main ideas from probability in separable Banach

spaces turned out to have one or more useful analogues for empirical processes Tightness became asymptotic equicontinuity
Metric entropy remained useful but also was adapted to metric entropy with bracketing random entropies and Kolchinskii
Pollard entropy Even norms themselves were in some situations replaced by measurable majorants to which the well
developed separable theory then carried over straightforwardly **Subject Guide to Books in Print** ,2001 Subject
