Development of a mobile application for carpooling the elderly Mohamed Lamine Fetni,2020-03-27 Bachelor Thesis from the year 2019 in the subject Computer Science Applied language English abstract This thesis proposes a platform to help improve elder s mobility through carpooling a way for car drivers to share their private vehicle with more elders in order to splitting and reducing costs Carpooling may be one of the best solutions when there is no other mean of transportation to a specific location but naturally it is not the only one Mobile applications take more and more part of everyone s lives different services for carpooling with different features begin to compete with existing transportation solutions Some people start to prefer using new carpooling services over the traditional services represented by taxi services GoRide aims to promote carpooling by targeting elders making it easier for them to adhere and use this system In general people have a hard time conciliating their schedules because of the way they move from one location to another And elders suffer from this the most especially here in Algeria since transportation between cities is not that great As students we think there should exist more suitable transportation solutions to places where transportation networks are short and cheap and helpful for elders By targeting elders people will more likely join the service since its users are primarily other people form the same environment To put the carpooling system in place we have designed and developed an Android mobile application with backend servers for users to access the carpooling service through their smartphones additionally the application involves some features that are critical to the service By using Android Development Tools and Libraries and efficient backend solutions we have managed to make the application simple but powerful as well which makes this application very useful for the young and the old to use Our app GoRide will be a unique carpooling application that would take benefits of the advantages of carpooling and try to improve and eliminate the disadvantages all while focusing on making it a good carpooling experience for elders The realization of our project will go through the conceptual phase and then development phase Since making a good application requires good planning first

Recommendersysteme in Software Shops für mobile Plattformen (SwSmP) Daniel Bialas, 2011-04-23 Masterarbeit aus dem Jahr 2011 im Fachbereich Informatik Wirtschaftsinformatik Note 1,3 Otto Friedrich Universität Bamberg Lehrstuhl für Angewandte Informatik Kooperative Systeme Sprache Deutsch Abstract Die fortschreitende Entwicklung von mobilen Endgeräten wie Personal Digital Assistants PDAs und Smartphones ermöglicht einen immer weiter gehenden Einsatz für Aufgaben im beruflichen und privaten Umfeld von Benutzern. Kleine Anwendungen für diese mobilen Endgeräte werden kurz auch als App bezeichnet und können über Software Shops der verschiedenen Plattformen einfach erworben, installiert und genutzt werden. Allerdings wird mittlerweile eine Vielzahl von Apps angeboten, so dass Benutzer Schwierigkeiten haben, eine in ihrer Situation empfehlenswerte App zu finden. Dazu können Recommendersysteme verwendet werden, was gerade in einem mobilen Umfeld sinnvoll erscheint. Dies liegt zum einen an den beschriebenen Benutzerschnittstellen der Mobilgeräte. Benutzer können hier nicht leicht sehr viele Suchergebnisse auswerten, sondern die ersten Treffer einer Suche nach Anwendungen sollten empfehlenswerte Apps liefern. Zum anderen ist in einem mobilen Umfeld eine Anpassung an den aktuellen Kontext wie Ort und Zeit wichtig. In dieser Abschlussarbeit soll nun genauer untersucht werden, wie man ein kontextsensitives Recommendersystem für Software Shops für mobile Plattformen SwSmP konzipieren und umsetzen kann. Dazu sollen zunächst in einem Grundlagen-Teil existierende SwSmP in Frage kommende Kontextarten und grundlegende Recommenderalgorithmen betrachtet werden. Darauf aufbauend soll ein eigenes Konzept zur Empfehlung von Apps entwickelt werden. Neben Ort und Zeit erscheint auch eine Anpassung der Empfehlung an den aktuell verwendeten Endgerätetyp sinnvoll. Das entwickelte Konzept soll dann in einer prototypischen Implementierung zum Teil realisiert und z.B. in einer kleinen Benutzerstudie evaluiert werden. Der Schwerpunkt dabei liegt auf der mobilen Schnittstelle zum Recommendersystem.
