*Secure And Dynamic Search Over Encrypted Cloud Data in*

*Dot Net Framework* Dr.V.V.L.N. Sastry,2020-05-05 Due to the increasing popularity of cloud computing more and more data owners are motivated to outsource their data to cloud servers for great convenience and reduced cost in data management However sensitive data should be encrypted before outsourcing for privacy requirements which obsoletes data utilization like keyword based document retrieval In this paper we present a secure multi keyword ranked search scheme over encrypted cloud data which simultaneously supports dynamic update operations like deletion and insertion of documents Specifically the vector space model and the widely used TF\_IDF model are combined in the index construction and query generation We construct a special tree based index structure and propose a Greedy Depth first Search algorithm to provide efficient multi keyword ranked search The secure kNN algorithm is utilized to encrypt the index and query vectors and ensure accurate relevance score calculation between encrypted index and query vectors In order to resist statistical attacks phantom terms are added to the index vector for blinding search results Due to the use of our special tree based index structure the proposed scheme can achieve sub linear search time and deal with the deletion and insertion of documents flexibly Extensive experiments are conducted to demonstrate the efficiency of the proposed scheme
