 , 1997 An Electric Vehicle Conversion Start-Up. Development of a Business Model Approach Fabian Hoeft, 2019-10-24
 Master's Thesis from the year 2019 in the subject Business economics Business Management Corporate Governance grade 1
 3 Niederrhein University of Applied Sciences Krefeld School of Business and Economics language English abstract Today's
 world of mobility is characterised by a high degree of dynamism and change is becoming apparent Currently around 45
 million passenger cars with conventional combustion engines powered by diesel or petrol are registered in Germany The
 share of electric vehicles is still well below one per cent Nevertheless the voices for sustainable and environmentally friendly
 transport are becoming louder One political measure in this respect is the implementation of driving bans in major German
 cities for some conventional combustion cars Car electrification is a solution for converting cars with conventional
 combustion engines to electric drives In the context of this thesis car electrification is regarded as a transition solution
 towards a nationwide electrified transport network of new electric cars A comprehensive concept of a business model
 approach from a start up perspective has been developed based on the analysis of the environment industry and customer
 needs Analysing the structure of the electrical conversion industry revealed that the subject of car electrification is hardly
 widespread and that current suppliers have only converted a smaller number of cars Besides the small scale of
 implementation the operational execution by existing suppliers can be considered weak in terms of competitiveness and
 sustainability The analysis of the needs of potential customers of car electrification using qualitative and quantitative
 methods has led to incredibly valuable insights for the development of the business model approach A high openness to
 purchase was expressed considering some of the factors mentioned such as a test drive with an electrified car before
 purchase and a durability guarantee of the conversion The high relevance of initial acquisition costs compared to operating
 expenses in the purchase decision for passenger cars is another precious insight The business model approach developed
 based on the findings obtained differs fundamentally from the strategies of today's providers By incorporating the existing
 infrastructure of workshops and service points proximity to the end customer and scalability of the business operation can be
 achieved Partnering with universities and industry are two critical elements in the development of a sustainable secure and
 user friendly technical solution F&S Index United States Annual, 1999 **Hoover's MasterList of Major U.S.**
