Progress in String, Field and Particle Theory L. Baulieu, Eliezer Rabinovici, Jeff Harvey, Boris Pioline, Paul Windey, 2003-09-30 The NATO Advanced Study Institute and EC Summer School Progress in String Field and Particle Theory was held in Cargèse from June 25th till July 11th 2002 The main focus of the school was the recent progress in the very active areas of superstring theory quantum gravity and the theory of elementary particles It covered topical problems in domains such as duality between gravity and gauge interactions string field theory tachyon condensation non commutative field theory string cosmology and string phenomenology The School featured daily introductory lectures and topical seminars An informal Gong Show session allowed young post doctoral researchers and senior graduate students to make a concise presentation of their current work The School gave an excellent opportunity to the youngest researchers to establish a close relationship with their seniors and with the lecturers These proceedings will further serve in fixing the acquired knowledge and hopefully become a useful reference for anyone working in this fascinating domain of physics Some of the contributions provide an elementary introduction to their subject while other ones are more geared to the specialist We are deeply indebted to the NATO Division for Scientific Affairs for funding and for their constant attention for our meetings and to the European Commission for a High Level Scientific Conference grant HPCFCT 2001 00298

Energy Research Abstracts, 1988 **Progress in String Theory Research** Fred P. Davis (Editor), 2016 At the first look the String Theory seems just an interesting and non trivial application of the quantum mechanics and the special relativity to vibrating strings By itself the quantization of relativistic strings does not call the attention of the particle physicist as a significant paradigm shift However when the string quantization is performed by

applying the standard rules of the perturbative Quantum Field Theory one discovers that the strings in certain states have the same physical properties as the gravity in the flat space time Chapter one of this book reviews the construction of the thermal bosonic string and D brane in the framework of the Thermo Field Dynamics TFD It briefly recalls the well known light cone quantization of the bosonic string in the conformal gauge in flat space time and gives a bird s eye view of the fundamental concepts of the TFD Chapter two examines a visual model inspired by string theory on the system of interacting anyons Chapter three investigate the late time dynamic of the universe in a 7 dimensional cosmology in the presence of higher order curvature terms arising from the heterotic string effective action Chapter four discusses life resulting from strings water and DNA united by mislion The final chapter provides new viewpoints of light quantum research on lightstring
