for formally representing process knowledge and a number of projects in the US and Europe began to consider computer assistance CASE as a viable approach to support software engineering In 1985 the time appeared ripe for an attempt at integrating these experiences in a comprehensive CASE framework relating all phases of an information systems lifecycle The Commission of the European Communities decided in early 1986 to fund this joint effort by six European software houses and research institutions in the Software Technology section of the ESPRIT I program The project was given the number 892 and the title DAIDA Development Assistance for Intelligent Database Applications
