Riemann's Boundary Problem with Infinite Index Nikolaj V. Govorov, 2012-12-06 native settlement in 1950 he graduated as an extramural student from Grozny Teachers College and in 1957 from Rostov University He taught mathematics in Novocherkassk Polytechnic Institute and its branch in the town of Shachty That was when his mathematical talent blossomed and he obtained the main results given in the present monograph In 1969 N V Govorov received the degree of Doctor of Mathematics and the academic rank of a Professor From 1970 until his tragic death on 24 April 1981 N V Govorov worked as Head of the Department of Mathematical Analysis of Kuban University actively engaged in preparing new courses and teaching young mathematicians His original mathematical talent vivid reactions kindness bordering on self sacrifice made him highly respected by everybody who knew him In preparing this book for publication I was given substantial assistance by E D Fainberg and A I Heifetz while V M Govorova took a significant part of the technical work with the manuscript Professor C Prather contributed substantial assistance in preparing the English translation of the book I V Ostrovskii PREFACE The classic statement of the Riemann boundary problem consists in finding a function z which is analytic and bounded in two domains D and D^* with a common boundary a smooth closed contour L admitting a continuous extension onto L both from D and D^* and satisfying on L the boundary condition $t G t t g t$

Encyclopaedia of Mathematics Michiel Hazewinkel, 2012-12-06 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques
