Rise And Fall Of Epithelial Phenotype Concepts Of Epithelial Mesenchymal Transition:

Rise and Fall of Epithelial Phenotype Pierre Savagner, 2007-07-05 Epithelial phenotype is a dynamic stage of differentiation that can be modulated during several physiological or pathological events The rapid conversion to a mesenchymal like phenotype is called an epithelial mesenchymal transition EMT The Rise and Fall of Epithelial Phenotype is the first book to comprehensively introduce the concept of EMT The first part of this volume describes main examples and models and explains their physiological relevance These examples include hydra morphogenesis gastrulation in mouse drosophila and sea urchin as well as neural crest cell migration and heart morphogenesis in vertebrates Part two reviews in detail specific EMT molecular pathways covering extracellular induction transduction and transcription response and modulation of cell cell adhesion structures It emphasizes new specific pathways with potential medical applications EMTs can also be linked to pathological events such as wound healing and cancer progression as detailed in this section of the book

Ovarian Cancer M. Sharon Stack, David A. Fishman, 2009-09-18 Ovarian carcinoma continues to be responsible for more deaths than all other gynecologic malignancies combined due to a continued inability to achieve detection of early rather than advanced stage disease and the lack of effective tumor specific therapeutics Ovarian carcinogenesis invasion and metastatic dissemination require a complex cascade of interrelated genetic molecular and biochemical events that regulate the neoplastic transition of normal ovarian surface epithelium This updated second edition includes exciting new advances in ovarian cancer detection and treatment and provides an analysis of current research into aspects of malignant transformation growth control and metastasis A more detailed understanding of these processes may ultimately translate into the development of novel approaches for the detection and control of ovarian cancer *Proprotein Convertases in*

Gynecological Cancers Daniel Bassi, Andres J. P. Klein-Szanto, 2012 Gynecological cancers include neoplasias of internal female genital organs mainly ovarian endometrial and cervical tumors and cancers of the external female genital structures Current scientific evidence indicates that both up and down regulation of the expression of PCs are part of the multiple changes occurring in these gynecological tumors Nevertheless the physiological significance of this puzzling pattern of PC expression remains elusive The fact that PCs can activate both pro and anticarcinogenic substrates may indicate that the nature of the overexpressed substrates in certain cancer types could determine the final outcome i e slowing or accelerating cancer development

Cellular Adhesion in Development and Disease, 2015-02-27 Cell adhesion is a fundamental determinant of embryonic development and organogenesis Cellular Adhesion in Development and Disease volume 112 in Current Topics in Developmental Biology comprehensively surveys current developments in understanding how adhesion systems affect organismal development Topics covered include nectins nectin like molecules and afadin in development cadherin adhesion signaling and morphogenesis endothelial cell junctions epidermal development and barrier formation and more This book surveys current understanding of how adhesion systems affect organismal development **Ways to**

improve tumor uptake and penetration of drugs into solid tumors Fabrizio Marcucci, Angelo Corti, Ronald Berenson, 2014-12-05 The main scope of this topic is to give an update on pharmacologic and non pharmacologic approaches to enhance uptake and penetration of cancer drugs into tumors Inadequate accumulation of drugs in tumors has emerged over the last decade as one of the main problems underlying therapeutic failure and drug resistance in the treatment of cancer Insufficient drug uptake and penetration is causally related to the abnormal tumor architecture Thus poor vascularization increased resistance to blood flow and impaired blood supply represent a first obstacle to the delivery of antitumor drugs to tumor tissue Decreased or even inverted transvascular pressure gradients compromise convective delivery of drugs Eventually an abnormal extracellular matrix offers increased frictional resistance to tumor drug penetration Abnormal tumor architecture also changes the biology of tumor cells which contributes to drug resistance through several different mechanisms The variability in vessel location and structure can make many areas of the tumor hypoxic which causes the tumor cells to become quiescent and thereby resistant to many antitumor drugs In addition the abnormally long distance of part of the tumor cell population from blood vessels provides a challenge to delivering cancer drugs to these cells We have recently proposed additional mechanisms of tumor drug resistance which are also related to abnormal tumor architecture First increased interstitial fluid pressure can by itself induce drug resistance through the induction of resistance promoting paracrine factors Second the interaction of drug molecules with vessel proximal tumor cell layers may also induce the release of these factors which can spread throughout the cancer and induce drug resistance in tumor cells distant from blood vessels As can be seen abnormal tumor architecture inadequate drug accumulation and tumor drug resistance are tightly linked phenomena suggesting the need to normalize the tumor architecture including blood vessels and or increase the accumulation of cancer drugs in tumors in order to increase therapeutic effects Indeed several classes of drugs that we refer to as promoter drugs have been described that promote tumor uptake and penetration of antitumor drugs including those that are vasoactive modify the barrier function of tumor vessels debulk tumor cells and overcome intercellular and stromal barriers In addition also non pharmacologic approaches have been described that enhance tumor accumulation of effector drugs e g convection enhanced delivery hyperthermia etc Some drugs that have already received regulatory approval e g the anti VEGF antibody bevacizumab exert antitumor effects at least in part through normalization of the tumor vasculature and enhancement of the accumulation of effector drugs Other drugs acting through different mechanisms of action are now in clinical development e g NGR TNF in phase II III studies and others are about to enter clinical investigation e g JO 1

Metastasis of Breast Cancer R.E. Mansel, Oystein Fodstad, Wen G. Jiang, 2007-06-17 Metastasis spread of cancer in the body is the main cause of death for patients with breast cancer the leading female tumour in the industrialised countries and developing countries alike The biology and treatment of breast cancer metastasis remains an active area of scientific and clinical investigation Written by experts in the subject area the book has covered a broad range of topics in the

metastasis of breast cancer from genetics biology to clinical management Main topics include genetic control biology growth factors cell adhesion cell motility and invasion nature of bone metastasis sentinel node therapies hormonal links new biomarkers and detection of micrometastasis and diagnosis The book also covers the current treatment options including surgical management chemotherapy and hormonal therapies This timely book provides the current knowledge in the area of breast cancer metastasis and will be of important reading material for oncologists radiologists cancer researchers biologists and health worker

Epigenetic Regulation of Skin Development and Regeneration Vladimir A. Botchkarev, Sarah E. Millar, 2018-09-03 This indispensable volume highlights recent studies identifying epigenetic mechanisms as essential regulators of skin development stem cell activity and regeneration Chapters are contributed by leading experts and promote the skin as an accessible model system for studying mechanisms that control organ development and regeneration The timely discussions contained throughout are of broad relevance to other areas of biology and medicine and can help inform the development of novel therapeutics for skin disorders as well as new approaches to skin regeneration that target the epigenome Part of the highly successful Stem Cells and Regenerative Medicine series Epigenetic Regulation of Skin Development and Regeneration uncovers the fundamental significance of epigenetic mechanisms in skin development and regeneration and emphasizes the development of new therapies for a number of skin disorders such as pathological conditions of epidermal differentiation pigmentation and carcinogenesis At least six categories of researchers will find this book essential including stem cell developmental hair follicle or molecular biologists and gerontologists or clinical dermatologists

Handbook of Proteases in Cancer Sajal Chakraborti, 2024-12-13 This handbook provides comprehensive coverage of the role of proteases and the associated biochemical pathways in cancer development and metastasis Proteases make up about 2% of the human genome and play a critical role in the tumor microenvironment Handbook of Proteases in Cancer Cellular and Molecular Aspects introduces the major classes of proteases and the signal transduction mechanisms associated with cancer initiation and progression It discusses the role of inflammation and immune responses in protease induced cancer The book covers cancer induced gene expression and apoptotic and necrotic pathways in cancer This is useful for researchers and professionals in cancer research biochemistry and physiology Key Features Provides insights on the roles of proteases and anti proteases in the tumor microenvironment Covers various cancer induced apoptotic and necrotic pathways Discusses the mechanisms by which proteases induce an increase in inflammation immune response and gene expression Covers the function of protease activated receptors in cancer Reviews the different gene expression pathways and the ways they become erratic during protease induced cancer
