2021 16th European Conference on Innovation and Entrepreneurship Vol 1 Dr Florinda Matos, Prof Maria de Fátima Ferreiro, Prof Álvaro Rosa, Prof Isabel Salavisa, 2021-09-16 These proceedings represent the work of contributors to the 16th European Conference on Innovation and Entrepreneurship ECIE 2021 hosted by ISCTE Business School Instituto Universit rio de Lisboa Portugal on 16-17 September 2021. The Conference Chair is Dr Florinda Matos and the Programme Co-Chairs are Prof Maria de Fátima Ferreiro Prof Álvaro Rosoi and Prof Isabel Salavisa, all from Instituto Universit rio de Lisboa Portugal. ECIE is a well-established event on the academic research calendar and now in its 16th year, the key aim remains the opportunity for participants to share ideas and meet the people who hold them. The conference was due to be held at Instituto Universit rio de Lisboa Portugal but due to the global Covid-19 pandemic it was moved online to be held as a virtual event. The scope of papers will ensure an interesting two days. The subjects covered illustrate the wide range of topics that fall into this important and ever-growing area of research. The keynote presentation is given by Soumodip Sarkar, Vice Rector from University of Vora Portugal, on the topic of Social Intelligence. The second day of the conference will open with an address by Professor Vittorio Loreto, Sapienza University of Rome, Italy, who will talk about Exploring the adjacent possible play anticipation surprise. Timing Analysis of Real-Time Software M.G. Rodd, L. Motus, 1994-12-01 The authors set out to address fundamental design issues facing engineers when developing the software for real-time computer-based control systems in which all programs must be safe, reliable, predictable and able to cope with the occurrence of faults. Despite rapid

progress in computer technology the attention of designers is still focused on finding logically correct algorithms to implement the required control It has however become evident that this is insufficient and that attention must be paid to meeting the complex timing interactions which occur between the systems under control and the computers controlling them This book suggests that the answers lie in the use of understandable engineering relevant mathematically sound tools for expressing and analysing the complex temporal interactions Timing Analysis of Real Time Software is not a designer s handbook rather it discusses the nature of the problems involved and how they can be handled The focus is on the use of modelling techniques based on the so called Quirk model initially developed in the United Kingdom and over the past decade extensively developed in institutions in the ex Soviet Union and Europe This book shows how the techniques can be used to form the basis of a new generation of CASE computer assisted software engineering tools and examples are given of how these can be used to design embedded systems ranging from digital controllers through to communication protocol handlers
