World Congress,1961 The Chanson des Chétifs and Chanson de Jérusalem Carol Sweetenham,2020-04-22 The First Crusade was arguably one of the most significant events of the Middle Ages It was the only event to generate its own epic cycle the Old French Crusade Cycle The central trilogy at the heart of the Cycle describes the Crusade from its beginnings to the climactic battle of Ascalon comprising the Chanson d Antioche the Chanson des Ch tifs and the Chanson de J rusalem This translation of the Ch tifs and the J rusalem accompanies and completes the translation of the Antioche and makes the trilogy available to English readers in its entirety for the first time The value of the trilogy lies above all in the insight it gives us to medieval perceptions of the Crusade The events are portrayed as part of a divine plan where even outcasts and captives can achieve salvation through Crusade This in turn underlies the value of the Cycle as a recruiting and propaganda tool The trilogy gives a window onto the chivalric preoccupations of thirteenth century France exploring concerns about status heroism and defeat It portrays the material realities of the era in vivid detail the minutiae of combat smoke filled halls feasts prisons and more And the two newly translated poems are highly entertaining as well featuring a lubricious Saracen lady not in the first flush of youth a dragon inhabited by a devil marauding monkeys miracles and much more The historian will find little new about the Crusade itself but abundant material on how it was perceived portrayed and performed The translation is accompanied by an introduction examining the origins of the two poems and their wider place in the cycle It is supported by extensive footnotes a comprehensive index of names and places and translations of the main variants **Papers Presented at the I.P.S.A.**

,1959 *Methods For Monitoring Tiger And Prey Populations* K. Ullas Karanth,James D. Nichols,2017-10-26 This book addresses issues of monitoring populations of tigers ungulate prey species and habitat occupancy with relevance to similar

assessments of large mammal species and general biodiversity. It covers issues of rigorous sampling, modeling, estimation, and adaptive management of animal populations using cutting edge tools such as camera traps, genetic identification, and Geographic Information Systems (GIS) applied under the modern statistical approach of Bayesian and likelihood based inference. Of special focus here are animal survey data derived for use under spatial capture-recapture, occupancy distance sampling, mixture modeling, and connectivity analyses. Because tigers are icons of global conservation, in the last five decades enormous amounts of commitment and resources have been invested by tiger range countries and the conservation community for saving wild tigers. However, the status of the big cat remains precarious. Rigorous monitoring of surviving wild tiger populations continues to be essential for both understanding and recovering wild tigers. However, many tiger monitoring programs lack the necessary rigor to generate reliable results. While the deployment of technologies, analyses, computing power, and human resource investments in tiger monitoring have greatly progressed in the last couple of decades, a full comprehension of their correct deployment has not kept pace in practice. In this volume, Dr. Ullas Karanth and Dr. James Nichols, world leaders in tiger biology and quantitative ecology respectively, address this key challenge. They have collaborated with an extraordinary array of 30 scientists with expertise in a range of necessary disciplines: biology and ecology of tigers, prey, and habitats; advanced statistical theory and practice; computation and programming; practical field sampling methods that employ technologies as varied as camera traps, genetic analyses, and geographic information systems. The book is a tour de force of cutting edge methodologies for assessing not just tigers but also other predators and their prey. The 14 chapters here are lucidly presented in a coherent sequence to provide tiger-specific answers to fundamental questions in animal population assessment: why monitor, what to monitor, and how to monitor. While highlighting robust methods, the authors also clearly point out those that are in use but unreliable. The managerial dimension of tiger conservation described here, the task of matching monitoring objectives with skills and resources to integrate tiger conservation under an adaptive framework, also renders this volume useful to wildlife scientists as well as conservationists.
