Riparian Ecosystem Recovery In Arid Lands Strategies And References:

Riparian Ecosystem Recovery in Arid Lands Mark K. Briggs, 2023-02-07 Riparian ecosystems are declining throughout the southwestern United States where many have disappeared completely yet progress toward checking their decline has been marginal and the results of only a few recovery projects have been evaluated In this guidebook Mark K Briggs has filled this gap in riparian conservation literature Based on his experiences gleaned from evaluating the results of many riparian rehabilitation projects Briggs presents these results in a manner that biologists hydrologists government planners resource managers and other concerned citizens can immediately apply toward developing site specific recovery strategies The book opens with a review of watershed characteristics and an examination of drainage systems then proceeds to determining the causes of riparian decline It introduces five factors that have a significant effect on the results of riparian rehabilitation natural regeneration water availability channel stability direct impacts such as livestock grazing and recreational activities and soil salinity and offers case studies that demonstrate how revegetation has been used both effectively and ineffectively It also discusses strategies other than revegetation that may be effective in improving the ecological condition of a site Many of the strategies presented are also relevant to nonarid climates and to urban areas By emphasizing evaluation of riparian ecosystems so that the causes of degradation can be understood and by offering general approaches that can be tailored to specific situations Riparian Ecosystem Recovery in Arid Lands takes a holistic approach to riparian recovery that will enable users to better judge whether recovery expenditures are likely to produce desired results An unprecedented work it will substantially add to efforts across the Southwest and elsewhere to restore these unique and priceless ecosystems

Eguiarte,2020-07-18 Environmental and specific diversity in the Chihuahuan desert in general and in the Cuatro Ci negas Basin in particular has long been recognized as outstanding This book provides a global ecological overview together with in depth studies of specific processes The Chihuahuan desert is the warmest in North America and has a complex geologic climatic and biogeographical history which affects today s distribution of vegetation and plants and generates complex phylogeographic patterns The high number of endemic species reflects this complex set of traits The modern distribution of environments including aquatic and subaquatic systems riparian environments gypsum dunes and gypsum rich soils low levels of phosphorous and organic matter and high salinity combined with an extreme climate call for a range of adaptations Plants are distributed in a patchy pattern based on punctual variations and many of them respond to different resources and conditions with considerable morphological plasticity In terms of physiological morphological and ecological variability cacti were identified as the most important group in specific environments like bajadas characterized by high diversity values while gypsophytes and gypsovaques of different phylogenies including species with restricted distribution and endemics *Fort Bliss Mission and Master Plan (TX,NM)* ,2001

T. Forman,2019-02-07 Towns and villages are sometimes viewed as minor even quaint spots whereas this book boldly reconceptualizes these places as important dynamic environmental hotspots Multitudes of towns and villages with nearly half the world s population characterize perhaps half the global land surface The book s pages feature ecological patterns processes and change as well as human dimensions both within towns and in strong connections and effects on surrounding agricultural land forest land and arid land Towns small to large and villages are examined with spatial and cultural lenses Ecological dimensions water soil and air systems together with habitats plants wildlife and biodiversity are highlighted A concluding section presents concepts for making better towns and better land From a pioneer in both landscape ecology and urban ecology this highly international town ecology book opens an important frontier for researchers students professors and professionals including environmental town and conservation planners

Great Basin Riparian Ecosystems Society for Ecological Restoration International,2004-02 Established by the USDA Forest Service in 1993 the Great Basin Ecosystem Management Project for Restoring and Maintaining Sustainable Riparian Ecosystems is a large scale research study that uses an interdisciplinary approach to examine the effects of climate change and human disturbance on riparian areas Structured as a collaborative effort between management and research the project focuses on understanding the geomorphic hydrologic and biotic processes that underlie riparian structure and function and the interrelated responses of those processes to disturbances

both natural and anthropogenic Great Basin Riparian Ecosystems edited by Jeanne C Chambers and Jerry R Miller presents the approach used by the researchers to study and understand riparian areas in the Great Basin region It summarizes the current state of knowledge about those areas and provides insights into the use of the information generated by the project for the restoration and management of riparian ecosystems Because semi arid ecosystems like the Great Basin are highly sensitive to climate change the study considered how key processes are affected by past and present climate Great Basin Riparian Ecosystems also examines the processes over a continuum of temporal and spatial scales Great Basin Riparian Ecosystems addresses restoration over a variety of scales and integrates work from multiple disciplines including riparian ecology paleoecology geomorphology and hydrology While the focus is on the Great Basin the general approach is widely applicable as it describes a promising new strategy for developing restoration and management plans one based on sound principles derived from attention to natural systems **Riparian Ecosystem Restoration in the Gila River Basin** ,1999
