Risk and Uncertainty in the Changing Global Energy Market, 2004

Risk and Uncertainty in the Changing Global Energy Market The Emirates Center for Strategic Studies and Research, 2004-06-09 The complex dynamics of the world energy market make it virtually impossible to map clearly the contours of the emerging global scenario. However, realistic trend evaluation, risk assessment, change management strategies, and provision for eventualities are imperatives for nations, organizations, and companies that have a major stake in the energy industry. Uncertainties may originate from many quarters: geopolitical factors, market forces, energy security issues, environmental and safety concerns. These risk factors call for careful analysis and effective solutions. ECSSR's Eighth Annual Energy Conference held in Abu Dhabi from October 19-20, 2002 assembled a panel of energy experts to identify and assess the major risks and uncertainties affecting the global energy market. The conference presentations contained in this book shed light on issues such as geopolitical and military risks, supply disruptions, accidents and contingencies, infrastructure constraints, price fluctuations, market uncertainties, and technical challenges. For both energy producers and consumers, there are valuable guidelines on minimizing foreseeable risks through techniques such as energy supply diversification, import reduction, moves developing alternative energy sources, building strategic links with suppliers, signing regional cooperation agreements, maintaining oil stockpiling, implementing pricing strategies, enhancing energy conservation, increasing energy efficiency, and countering speculative trading.

Perspectives on Energy Risk André Dorsman, Timur Gök, Mehmet Baha Karan, 2014-02-17 Since the Industrial Revolution, the efficiency with which energy resources are extracted and converted into work has played a prominent role in the accumulation of material wealth. The prominent role of energy resources in conjunction with their scarcity and their uneven geographic distribution has had significant repercussions. Collaboration, competition, and conflict among nation states for energy resources have created global geopolitical and market risks. In this volume, academic scholars and practitioners assess these risks from global geopolitical and market perspectives. They do so by presenting empirical research and discussing our current understanding of this quickly changing and developing field. This is the third volume in a series on energy organized by the Centre for Energy and Value Issues (CEVI). The previous volumes in the series were *Financial Aspects in Energy* 2011 and *Energy Economics and Financial Markets* 2012.

Perspective ,2014-01-15 As energy has become one of the crucial factors in ensuring the economic growth and the sustainable development of people nations societies and ultimately human civilisation in the 21st century global scenario there is a pressing need for treating energy as a strategic commodity and for analysing national regional and global

strategies concerning energy This is an attempt to debate and discuss various facets economic technological and political of such strategies and at the same time to encompass concepts like energy security and energy diplomacy that form significant components of such strategies Strategising of energy is an issue that is inextricably linked with the domestic and foreign policies of a nation or a region and it is characteristically futuristic as strategies are supposed to be made with a long term perspective Contemporary Asian realities serve as the perspective of such an analysis for several reasons Asia is the home of two fast growing and energy thirsty countries like China and India as well as Japan and the ASEAN countries There are at least three energy producing regions in Asia that are crucial for global energy security like West Asia the traditional one two upcoming regions of Central Asia and the area around South China Sea The Indian Ocean is one of the most important energy transit routes for international energy transport Even the smallest disruption in the production and transport chain of energy within Asia has the potential of upsetting the global energy balance This volume attempts to focus on a number of significant issues concerning the theme of strategising of energy Contributors analyse debate and discuss the questions from different viewpoints and different angles Thus this volume represents a wide spectrum of views from a scientist s vision of a world with cleaner energy to the strategist s comments on solutions to national energy issues from journalists views on the development of governmental policies on energy to academicians analyses of regional energy strategies and from historians analyses of the restructuring of the national energy infrastructure and the re prioritising of national energy strategies to debates on national regional as well as maritime energy strategies by specialists on international relations **Middle East Insight** ,1999
