Post Translational Processing A Practical Approach:

Post-translational Processing Steve J. Higgins, B. David Hames, Post translational Modification covers protein sequencing protein folding and import into organelles phosphorylation glycosylation and lipid modification proteolytic processing and protein turnover in mammalian cells and yeast

Post-translational Processing, 1999-05-20 Post translational Modification A Practical Approach and its companion volume Protein Expression A Practical Approach form the final part of the PAS mini series on protein synthesis and processing This volume begins with a chapter on protein sequencing followed by a chapter on protein folding and import into organelles The next three chapters cover the three major forms of covalent modification phosphorylation glycosylation and lipid modification Proteolytic processing the is the next topic and the final two chapters are concerned with protein turnover in mammalian cells and yeast This book is a comprehensive volume of the best current methodology and is designed to be used at the bench or away from the bench to gain insight into future experimental approaches

Regulation of Gene Expression in Plants Carole L. Bassett, 2007-02-15 Except for one area of gene expression control plant research has significantly fallen behind studies in insects and vertebrates The advances made in animal gene expression control have benefited plant research as we continue to find that much of the machinery and mechanisms controlling gene expression have been preserved in all eukaryotes Through comparison we have learned that certain aspects of gene regulation are shared by plants and animals i e both contain introns separating the coding regions of most genes and both utilize similar machinery to process the introns to form mature mRNAs Yet there are some interesting differences in gene structure and regulation between plants and animals For example unlike animal genes plant genes are generally much smaller with fewer and smaller introns *Regulation of Gene Expression in Plants* presents some of the most recent novel and fascinating examples of transcriptional and posttranscriptional control of gene expression in plants and where appropriate provides comparison to notable examples of animal gene regulation

RNA Methodologies Robert E. Farrell, 2005-04 This laboratory guide represents a growing collection of tried tested and optimized laboratory protocols for the isolation and characterization of eukaryotic RNA with lesser emphasis on the characterization of prokaryotic transcripts Collectively the chapters work together to embellish the RNA story each presenting clear take home lessons liberally incorporating flow charts tables and graphs to facilitate learning and assist in the planning and implementation phases of a project *RNA Methodologies* 3rd edition includes approximately 30% new material including chapters on the more recent technologies of RNA interference including RNAi Microarrays Bioinformatics It also includes new sections on new and improved RT PCR techniques innovative 5 and 3 RACE techniques subtractive PCR methods methods for improving cDNA synthesis Author is a well recognized expert in the field of RNA experimentation and founded Exon Intron a well known biotechnology educational workshop center Includes classic and contemporary techniques Incorporates flow charts tables and graphs to facilitate learning and assist in the planning phases of projects
