Several Complex Variables and Complex Geometry, Part I Eric Bedford, 1991 Geometry of Holomorphic Mappings Sergey Pinchuk, Rasul Shafikov, Alexandre Sukhov, 2023-09-14 This monograph explores the problem of boundary regularity and analytic continuation of holomorphic mappings between domains in complex Euclidean spaces Many important methods and techniques in several complex variables have been developed in connection with these questions and the goal of this book is to introduce the reader to some of these approaches and to demonstrate how they can be used in the context of boundary properties of holomorphic maps The authors present substantial results concerning holomorphic mappings in several complex variables with improved and often simplified proofs Emphasis is placed on geometric methods including the Kobayashi metric the Scaling method Segre varieties and the Reflection principle Geometry of Holomorphic Mappings will provide a valuable resource for PhD students in complex analysis and complex geometry it will also be of interest to researchers in these areas as a reference

Singularities and Foliations. Geometry, Topology and Applications

Raimundo Nonato Araújo dos Santos, Aurélio Menegon Neto, David Mond, Marcelo J. Saia, Jawad Snoussi, 2018-03-21 This proceedings book brings selected works from two conferences the 2nd Brazil Mexico Meeting on Singularity and the 3rd Northeastern Brazilian Meeting on Singularities that were held in Salvador in July 2015 All contributions were carefully peer reviewed and revised and cover topics like Equisingularity Topology and Geometry of Singularities Topological Classification of Singularities of Mappings and more They were written by mathematicians from several countries including Brazil Spain Mexico Japan and the USA on relevant topics on Theory of Singularity such as studies on deformations Milnor fibration foliations Catastrophe theory and myriad applications Open problems are also introduced making this volume a must read both for graduate students and active researchers in this field Lectures and Surveys on G2-Manifolds and Related Topics

Spiro Karigiannis, Naichung Conan Leung, Jason D. Lotay, 2020-05-26 This book one of the first on G2 manifolds in decades collects introductory lectures and survey articles largely based on talks given at a workshop held at the Fields Institute in August 2017 as part of the major thematic program on geometric analysis It provides an accessible introduction to various aspects of the geometry of G2 manifolds including the construction of examples as well as the intimate relations with calibrated geometry Yang Mills gauge theory and geometric flows It also features the inclusion of a survey on the new topological and analytic invariants of G2 manifolds that have been recently discovered The first half of the book consisting of several introductory lectures is aimed at experienced graduate students or early career researchers in geometry and topology who wish to familiarize themselves with this burgeoning field The second half consisting of numerous survey articles is intended to be useful to both beginners and experts in the field **The Mathematical Heritage of Henri**

Poincaré Felix E. Browder, 1983 On April 7 10 1980 the American Mathematical Society sponsored a Symposium on the Mathematical Heritage of Henri Poincaré held at Indiana University Bloomington Indiana This title presents the written

The Theory of $H(b)$ Spaces: Volume 2 Emmanuel Fricain, Javad Mashregi, 2016-10-20 An $H(b)$ space is defined as a collection of analytic functions that are in the image of an operator The theory of $H(b)$ spaces bridges two classical subjects complex analysis and operator theory which makes it both appealing and demanding Volume 1 of this comprehensive treatment is devoted to the preliminary subjects required to understand the foundation of $H(b)$ spaces such as Hardy spaces Fourier analysis integral representation theorems Carleson measures Toeplitz and Hankel operators various types of shift operators and Clark measures Volume 2 focuses on the central theory Both books are accessible to graduate students as well as researchers each volume contains numerous exercises and hints and figures are included throughout to illustrate the theory Together these two volumes provide everything the reader needs to understand and appreciate this beautiful branch of mathematics

The Theory of $H(b)$ Spaces Emmanuel Fricain, Javad Mashregi, 2016-10-20 In two volumes this comprehensive treatment covers all that is needed to understand and appreciate this beautiful branch of mathematics

Normal Surface Singularities András Némethi, 2022-10-07 This monograph provides a comprehensive introduction to the theory of complex normal surface singularities with a special emphasis on connections to low dimensional topology In this way it unites the analytic approach with the more recent topological one combining their tools and methods In the first chapters the book sets out the foundations of the theory of normal surface singularities This includes a comprehensive presentation of the properties of the link as an oriented 3 manifold and of the invariants associated with a resolution combined with the structure and special properties of the line bundles defined on a resolution A recurring theme is the comparison of analytic and topological invariants For example the Poincaré series of the divisorial filtration is compared to a topological zeta function associated with the resolution graph and the sheaf cohomologies of the line bundles are compared to the Seiberg Witten invariants of the link Equivariant Ehrhart theory is introduced to establish surgery additivity formulae of these invariants as well as for the regularization procedures of multivariable series In addition to recent research the book also provides expositions of more classical subjects such as the classification of plane and cuspidal curves Milnor fibrations and smoothing invariants the local divisor class group and the Hilbert Samuel function It contains a large number of examples of key families of germs rational elliptic weighted homogeneous superisolated and splice quotient It provides concrete computations of the topological invariants of their links Casson Walker and Seiberg Witten invariants Turaev torsion and of the analytic invariants geometric genus Hilbert function of the divisorial filtration and the analytic semigroup associated with the resolution The book culminates in a discussion of the topological and analytic lattice cohomologies as categorifications of the Seiberg Witten invariant and of the geometric genus respectively and of the graded roots Several open problems and conjectures are also formulated *Normal Surface Singularities* provides researchers in
