Several Complex Variables And Complex Manifolds In Two Parts:

Several Complex Variables and Complex Manifolds Mike Field, 1982 Annotation This self contained and relatively elementary introduction to functions of several complex variables and complex especially compact manifolds is intended to be a synthesis of those topics and a broad introduction to the field Part I is suitable for advanced undergraduates and beginning postgraduates whilst Part II is written more for the graduate student The work as a whole will be useful to professional mathematicians or mathematical physicists who wish to acquire a working knowledge of this area of mathematics Many exercises have been included and indeed they form an integral part of the text The prerequisites for understanding Part I would be met by any mathematics student with a first degree and together the two parts provide an introduction to the more advanced works in the subject

Several Complex Variables, Part 2 Raymond O'Neil

Wells, American Mathematical Society, 1977 Contains sections on Non compact complex manifolds Differential geometry and complex analysis Problems in approximation Value distribution theory Group representation and harmonic analysis and Survey papers *Collected Papers of Salomon Bochner, Part 4* Salomon Bochner, 1992-01-01 During his long and productive career Salomon Bochner worked in a variety of different areas of mathematics This four part set brings together his collected papers illustrating the range and depth of his mathematical interests The books are available either individually or as a set

From Holomorphic Functions to Complex Manifolds Klaus Fritzsche, Hans Grauert, 2012-12-06 The aim of this book is to give an understandable introduction to the theory of complex manifolds With very few exceptions we give complete proofs Many examples and figures along with quite a few exercises are included Our intent is to familiarize the reader with the most important branches and methods in complex analysis of several variables and to do this as simply as possible Therefore the abstract concepts involved with sheaves coherence and higher dimensional cohomology are avoided Only elementary methods such as power series holomorphic vector bundles and one dimensional co cycles are used Nevertheless deep results can be proved for example the Remmert Stein theorem for analytic sets finiteness theorems for spaces of cross sections in holomorphic vector bundles and the solution of the Levi problem The first chapter deals with holomorphic functions defined in open sub sets of the space \mathbb{C}^n Many of the well known properties of holomorphic functions of one variable such as the Cauchy integral formula or the maximum principle can be applied directly to obtain corresponding properties of holomorphic functions of several variables Furthermore certain properties of differentiable functions of several variables such as the implicit and inverse function theorems extend easily to holomorphic functions Elie Cartan (1869-1951) Maks Aizikovich Akivis, Boris Abramovich Rozenfel'd, 1993 This book describes the life and achievements of the great french mathematician lie Cartan Here readers will find detailed descriptions of Cartan s discoveries in Lie groups and algebras associative algebras differential geometry as well as later developments stemming from his ideas The volume includes a biographical sketch of Cartan s life A monumental tribute to a towering figure in the history of mathematics this book will appeal to mathematicians and historians alike Several Complex Variables, 1990 **L2 Approaches in Several Complex Variables** Takeo Ohsawa, 2018-11-28 This monograph presents the current status of a rapidly developing part of several complex variables motivated by the applicability of effective results to algebraic geometry and differential geometry Special emphasis is put on the new precise results on the L2 extension of holomorphic functions in the past 5 years In Chapter 1 the classical questions of several complex variables motivating the development of this field are reviewed after necessary preparations from the basic notions of those variables and of complex manifolds such as holomorphic functions pseudoconvexity differential forms and cohomology In Chapter 2 the L2 method of solving the $\bar{\partial}$ equation is presented emphasizing its differential geometric aspect In Chapter 3 a refinement of the Oka Cartan theory is given by this method The L2 extension theorem with an optimal constant is included obtained recently by Z Bocklandt and separately by Q A Guan and X Y

Zhou In Chapter 4 various results on the Bergman kernel are presented including recent works of Maitani Yamaguchi Berndtsson Guan Zhou and Berndtsson Lempert Most of these results are obtained by the L^2 method In the last chapter rather specific results are discussed on the existence and classification of certain holomorphic foliations and Levi flat hypersurfaces as their stable sets These are also applications of the L^2 method obtained during the past 15 years

Grundlagen der Analysis Heinz König, 2024-07-25 Die Vorlesungen von Heinz König zu den Grundlagen der Analysis eine Perle der mathematischen Lehre werden hier der interessierten Öffentlichkeit zugänglich gemacht Sie sind eine bemerkenswerte Mischung aus Bourbakismus und praktischer Mathematik eine neue Aufbereitung in stringenten Zusammenhängen auf hohem Abstraktionsniveau die gleichermaßen für die unmittelbare Anwendung hervorragend geeignet ist Zum Verständnis von Heinz Königs Vorlesungen werden ein grundlegendes Abstraktionsvermögen und Interesse an mathematischen Zusammenhängen zwingend vorausgesetzt *Catalogue, Books and Journals in Advanced Mathematics* American Mathematical Society, 1985 *Several Complex Variables and Complex Geometry, Part II* Eric Bedford, 1991 Complex Manifolds Steven Bell, J.-L. Brylinski, A.T. Huckleberry, R. Narasimhan, C. Okonek, Georg Schumacher, A. Van de Ven, S. Zucker, 1997-12-11 The articles in this volume were written to commemorate Reinhold Remmert's 60th birthday in June 1990 They are surveys meant to facilitate access to some of the many aspects of the theory of complex manifolds and demonstrate the interplay between complex analysis and many other branches of mathematics algebraic geometry differential topology representations of Lie groups and mathematical physics being only the most obvious of these branches Each of these articles should serve not only to describe the particular circle of ideas in complex analysis with which it deals but also as a guide to the many mathematical ideas related to its theme *Canadian Mathematical Bulletin*, 1968 **The Michigan Mathematical Journal**, 2008 **Several Complex Variables VII** H. Grauert, Thomas Peternell, R. Remmert, 2013-03-09 Of making many books there is no end and much study is a weariness of the flesh Eccl 12:12-1 In the beginning Riemann created the surfaces The periods of integrals of abelian differentials on a compact surface of genus g immediately attach a g -dimensional complex torus to X If $g \geq 2$ the moduli space of X depends on $3g-3$ complex parameters Thus problems in one complex variable lead from the very beginning to studies in several complex variables Complex tori and moduli spaces are complex manifolds i.e. Hausdorff spaces with local complex coordinates $Z^1 \times \dots \times Z^n$ holomorphic functions are locally those functions which are holomorphic in these coordinates *th* In the second half of the 19th century classical algebraic geometry was born in Italy The objects are sets of common zeros of polynomials Such sets are of finite dimension but may have singularities forming a closed subset of lower dimension outside of the singular locus these zero sets are complex manifolds **Selecta** Donald Clayton Spencer, 1985 *Several Complex Variables* H. Grauert, K. Fritzsche, 2012-12-06 The present book grew out of introductory lectures on the theory of functions of several variables Its intent is to make the reader familiar by the discussion of examples and special cases with the most important branches and methods of this theory among

them e.g. the problems of holomorphic continuation, the algebraic treatment of power series, sheaf and cohomology theory and the real methods which stem from elliptic partial differential equations. In the first chapter we begin with the definition of holomorphic functions of several variables, their representation by the Cauchy integral and their power series expansion on Reinhardt domains. It turns out that in contrast to the theory of a single variable for $n > 1$ with $G \subset \mathbb{C}^n$ and $G' \subset G$ such that each function holomorphic in G' has a continuation on G . Domains G for which such a G' does not exist are called domains of holomorphy. In Chapter 2 we give several characterizations of these domains of holomorphy, the theorem of Cartan-Thullen, Levi's problem. We finally construct the holomorphic hull $H(G)$ for each domain G that is the largest not necessarily schlicht domain over \mathbb{C}^n into which each function holomorphic on G can be continued.
