Zemanian, 1972 Realizability theory for continuous linear systems **Lexikon der Elektronik** Otger Neufang, 2013-03-12 Algebraically Approximate and Noisy Realization of Discrete-Time Systems and Digital Images Yasumichi Hasegawa, 2009-09-30 This monograph deals with approximation and noise cancellation of dynamical systems which include linear and nonlinear input output relationships It also deal with approximation and noise cancellation of two dimensional arrays It will be of special interest to researchers engineers and graduate students who have specialized in filtering theory and system theory and digital images This monograph is composed of two parts Part I and Part II will deal with approximation and noise cancellation of dynamical systems or digital images respectively From noiseless or noisy data reduction will be made A method which reduces model information or noise was proposed in the reference vol 376 in LNCIS Hasegawa 2008 Using this method will allow model description to be treated as noise reduction or model reduction without having to bother for example with solving many partial differential equations This monograph will propose a new and easy method which produces the same results as the method treated in the reference As proof of its advantageous effect this monograph provides a new law in the sense of numerical experiments The new and easy method is executed using the algebraic calculations without solving partial differential equations For our purpose many actual examples of model information and noise reduction will also be provided Using the analysis of state space approach the model reduction problem may have become a major theme of technology after 1966 for emphasizing efficiency in the fields of control economy numerical analysis and others *Approximate and Noisy Realization of Discrete-Time Dynamical Systems* Yasumichi Hasegawa, 2008-06-02 This monograph deals with approximation and noise cancellation of dynamical systems which include linear and nonlinear input output relations It will be of special interest to researchers engineers and graduate students who have specialized in filtering theory and system theory From noisy or noiseless data reduction will be made A new method which reduces noise or model information will be proposed Using this method will allow model description to be treated as noise reduction or model reduction As proof of the efficacy this monograph provides new results and their extensions which can also be applied to nonlinear dynamical systems To present the effectiveness of our method many actual examples of noise and model information reduction will also be provided Using the analysis of state space approach the model reduction problem may have become a major theme of technology after 1966 for emphasizing efficiency in the fields of control economy numerical analysis and others Noise reduction problems in the analysis of noisy dynamical systems may have become a major theme of technology after 1974 for emphasizing efficiency in control However

the subjects of these researches have been mainly concentrated in linear systems. In common model reduction of linear systems in use today a singular value decomposition of a Hankel matrix is used to find a reduced order model. However, the existence of the conditions of the reduced order model are derived without evaluation of the resultant model.

In the common typical noise reduction of linear systems in use today, the order and parameters of the systems are determined by minimizing information criterion. Approximate and noisy realization problems for input-output relations can be roughly stated as follows:

A The approximate realization problem: For any input-output map, find one mathematical model such that it is similar to the input-output map and has a lower dimension than the given minimal state

space of a dynamical system which has the same behavior to the input-output map.

B The noisy realization problem

Encyclopaedia of Mathematics Michiel Hazewinkel, 2012-12-06. This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics. It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985. The annotated translation consists of ten volumes including a special index volume. There are three kinds of articles in this ENCYCLOPAEDIA. First of all, there are survey-type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up-to-date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole, these articles should be understandable to mathematics students in their first specialization years, to graduates from other mathematical areas, and depending on the specific subject, to specialists in other domains of science, engineers, and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems, techniques, and concepts involved in the area in question. They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions. The second kind of article, of medium length, contains more detailed concrete problems, results, and techniques.

in System Theory A.C. Ran, J.H. van Schuppen, Marinus Kaashoek, 2013-03-07. This volume is the first of the three-volume publication containing the proceedings of the 1989 International Symposium on the Mathematical Theory of Networks and Systems (MTNS 89) which was held in Amsterdam, The Netherlands, June 19-23, 1989. The International Symposia MTNS focus attention on problems from system and control theory, circuit theory, and signal processing which in general require application of sophisticated mathematical tools such as from function and operator theory, linear algebra, and matrix theory, differential and algebraic geometry. The interaction between advanced mathematical methods and practical engineering problems of circuits, systems, and control which is typical for MTNS turns out to be most effective and is as these proceedings show a continuing source of exciting advances. The first volume contains invited papers and a large selection of other symposium presentations on the general theory of deterministic and stochastic systems with an emphasis on realization and

modelling A wide variety of recent results on approximate realization and system identification stochastic dynamical systems discrete event systems o systems singular systems and nonstandard models IS presented Preface vi Also a few papers on applications in hydrology and hydraulics are included The titles of the two other volumes are Robust Control of Linear Sys tems and Nonlinear Control volume 2 and Signal Processing Scatter ing and Operator Theory and Numerical Methods volume 3 The Editors are most grateful to the about 300 reviewers for their help in the refereeing process The Editors thank Ms G Bijleveld and Ms

Control Problems of Discrete-Time Dynamical Systems Yasumichi Hasegawa,2013-11-18 This monograph deals with control problems of discrete time dynamical systems which include linear and nonlinear input output relations It will be of popular interest to researchers engineers and graduate students who specialized in system theory A new method which produces manipulated inputs is presented in the sense of state control and output control This monograph provides new results and their extensions which can also be more applicable for nonlinear dynamical systems To present the effectiveness of the method many numerical examples of control problems are provided as well Internationale Bibliographie der Rezensionen wissenschaftlicher Literatur ,1977 *SIAM Journal on Control and Optimization* Society for Industrial and Applied Mathematics,2004 Mathematics in Science and Engineering ,1972 *International mathematical news* ,1973

Realization Theory and Design of Digital Images Yasumichi Hasegawa,Tatsuo Suzuki,2006-10-18 This monograph deals with the description and design of digital images Regarding digital images as special input output relations in our previous book with LNCIS series the description problem of digital images is transformed into the realization problem of digital images From the data in digital images mathematical models will be constructed Then new systems which describe faithfully any digital images provide new results and their extensions which design digital images As concerned with mathematical models for digital images this monograph introduces 2 Commutative Linear Representation Systems for two dimensional images and 3 Commutative Linear Representation Systems for three dimensional images This monograph is intended for researchers and graduate students who specialized in image processing and system theory
