Nonlinear Evolution Equations and Related Topics Wolfgang Arendt,Haim Brezis,Michel Pierre,2012-12-06 Philippe B nilan was a most original and charismatic mathematician who had a deep and decisive impact on the theory of nonlinear evolution equations The present volume is dedicated to him and contains research papers written by highly distinguished mathematicians They are all related to B nilan s work and reflect the present state of this most active field The contributions cover a wide range of nonlinear and linear equations Special topics are Hamilton Jacobi equations the porous medium equation reaction diffusion systems integro differential equations and visco elasticity maximal regularity for elliptic and parabolic equations and the Ornstein Uhlenbeck operator Also in this volume the legendary work of B nilan Br zis on Thomas Fermi theory is published for the first time **Semigroup Methods for Evolution Equations on Networks** Delio Mugnolo,2014-05-21 This concise text is based on a series of lectures held only a few years ago and originally intended as an introduction to known results on linear hyperbolic and parabolic equations Yet the topic of differential equations on graphs ramified spaces and more general network like objects has recently gained significant momentum and well beyond the confines of mathematics there is a lively interdisciplinary discourse on all aspects of so called complex networks Such network like structures can be found in virtually all branches of science engineering and the humanities and future research thus calls for solid theoretical foundations This book is specifically devoted to the study of evolution equations i e of time dependent differential equations such as the heat equation the wave equation or the Schr dinger equation quantum graphs bearing in mind that the majority of the literature in the last ten years on the subject of differential equations of graphs has been devoted to elliptic equations and related spectral problems Moreover for tackling the most general settings e g encoded in the transmission conditions in the network nodes one classical and elegant tool is that of operator semigroups This book is simultaneously a very concise introduction to this theory and a handbook on its applications to differential equations on networks With a more interdisciplinary readership in mind full proofs of mathematical statements have been frequently omitted in favor of keeping the text as concise fluid and self contained as possible In addition a brief chapter devoted to the field of neurodynamics of the brain cortex provides a concrete link to ongoing applied research **Recent Developments of Mathematical Fluid Mechanics** Herbert Amann,Yoshikazu Giga,Hideo Kozono,Hisashi Okamoto,Masao Yamazaki,2016-03-17 The aim of this proceeding is addressed to present recent developments of the mathematical research on the Navier Stokes equations the Euler equations and other related equations In particular we are interested in such problems as 1 existence uniqueness and regularity of weak solutions2 stability and its asymptotic behavior of the rest motion and the steady state3 singularity and blow up of weak and strong solutions4 vorticity and energy conservation5 fluid motions around the rotating axis or outside of the rotating body6 free boundary problems7 maximal regularity theorem and other abstract theorems for mathematical fluid mechanics Clifford Algebras and their Applications in Mathematical Physics

Rafał Abłamowicz,2000 The second part of a two volume set concerning the field of Clifford geometric algebra this work consists of thematically organized chapters that provide a broad overview of cutting edge topics in mathematical physics and the physical applications of Clifford algebras from applications such as complex distance potential theory supersymmetry and fluid dynamics to Fourier analysis the study of boundary value problems and applications to mathematical physics and Schwarzian derivatives in Euclidean space Among the mathematical topics examined are generalized Dirac operators holonomy groups monogenic and hypermonogenic functions and their derivatives quaternionic Beltrami equations Fourier theory under Mobius transformations Cauchy Reimann operators and Cauchy type integrals   Clifford Algebras and their Applications in Mathematical Physics John Ryan,Wolfgang Sprößig,2012-12-06   **Reproducing Kernel Spaces and Applications** Daniel Alpay,2012-12-06 20 Pattern recognition and statistical learning theory the theory of support vector machines See 40 58 In this last volume we refer in particular to the papers 63 and 64 Since this topic is maybe less known to the operator theory community we mention that the support vector method is a general approach to function estimation problems See 63 p 26 We note that the above list and the given references are by no way exhaustive We refer to the first section of the paper of S Saitoh in the present volume for another and mainly different list of topics where reproducing kernel spaces appear Quite often a given question is best understood in a reproducing kernel Hilbert space for instance when using Cauchy s formula in the Hardy space H 2 and one finds oneself as Mr Jourdain of Moliere Bourgeois Gentilhomme speaking Prose without knowing it 48 p 51 Par ma foi il y a plus de quarante ans que je dis de la prose sans que l j en susse rien   Functional Analysis and Related Topics, 1991 Hikosaburo Komatsu,2006-11-15 In these proceedings of the international conference held in Kyoto in memoryof the late Professor K saku Yosida twenty six invited speakers display in their many facets of functional analysis and its applications in the research tradition of Yosida s school Many of the topics are related tolinear and non linear partial differential equations including the Schr dinger equations the Navier Stokes equations and quasilinear hyperbolic equations Several of the papers are survey articles the others are original unpublished and refereed research articles Also included is a full listing of the publications of K Yosida Recommendedto students and research workers looking for a bird s eye view of current research activity in functional analysis and its applications FROM THE CONTENTS K Ito Semigroups in probability theory T Kato Abstract evolution equations linear and quasilinear revisited J L Lions Remarkson systems with incompletely given initial data and incompletely given part of the boundary H Brezis New energies for harmonic maps and liquid crystals D Fujiwara Some Feynman path integrals as oscillatory integrals over a Sobolev manifold M Giga Y Giga H Sohr L estimates for the Stokes system Y Kawahigashi Exactly solvable orbifold models and subfactors H Kitada Asymptotic completeness of N body wave operators II A new proof for the short range case and the asymptotic clustering for the long range systems Y Kobayashi S Oharu Semigroups oflocally Lipschitzian operators and applications H Komatsu Operational calculus and semi groups of operators   **Revue roumaine de mathématiques pures**
