of researchers from different disciplines such as software electrical and mechanical engineering with a clear focus on economic decision making The research focused on four areas data mining reference architectures mechanisms and patterns for evolvability in particular visualization they will not only find a state of the art overview on evolvability research but also guidelines to make systems more evolvable and new industrially validated techniques to improve the evolvability of embedded systems **Proceedings** ,2005 *Software Evolution and Feedback* Nazim H.
