Pfaffs Problem And Its Generalizations:

Pfaff's Problem and Its Generalizations Jan Arnoldus Schouten, Wouter Kulk, 1969 In its simplest form the Pfaff problem formulated by Pfaff in 1819 consists of determining the maximal integrable manifold of a Pfaffian system i.e. of a system of vector fields in \mathbb{R}^n This book gives a solution of this problem and discusses various generalizations giving an essentially complete treatment of the theory as it was known in 1949

Wilde, 2023-01-04 Introduction to SYSTEM SCIENCE with MATLAB Explores the mathematical basis for developing and evaluating continuous and discrete systems In this revised Second Edition of Introduction to System Science with MATLAB the authors Gary Sandquist and Zakary Wilde provide a comprehensive exploration of essential concepts mathematical framework analytical resources and productive skills required to address any rational system confidently and adequately for quantitative evaluation This Second Edition is supplemented with new updates to the mathematical and technical materials from the first edition A new chapter to assist readers to generalize and execute algorithms for systems development and analysis as well as an expansion of the chapter covering specific system science applications is included The book provides the mathematical basis for developing and evaluating single and multiple input output systems that are continuous or discrete It offers the mathematical basis for the recognition definition quantitative modeling analysis and evaluation in system science The book also provides A comprehensive introduction to system science and the principles of causality and cause and effect operations including their historical and scientific background A complete exploration of fundamental systems concepts and basic system equations including definitions and classifications Practical applications and discussions

of single input systems multiple input systems and system modeling and evaluation An in depth examination of generalized system analysis methods and specific system science applications Perfect for upper level undergraduate and graduate students in engineering mathematics and physical sciences Introduction to System Science with MATLAB will also earn a prominent place in libraries of researchers in the life and social sciences

Quantization of Gauge Systems Marc Henneaux, Claudio Teitelboim, 2020-06-16 This book is a systematic study of the classical and quantum theories of gauge systems It starts with Dirac's analysis showing that gauge theories are constrained Hamiltonian systems The classical foundations of BRST theory are then laid out with a review of the necessary concepts from homological algebra Reducible gauge systems are discussed and the relationship between BRST cohomology and gauge invariance is carefully explained The authors then proceed to the canonical quantization of gauge systems first without ghosts reduced phase space quantization Dirac method and second in the BRST context quantum BRST cohomology The path integral is discussed next The analysis covers indefinite metric systems operator insertions and Ward identities The antifield formalism is also studied and its equivalence with canonical methods is derived The examples of electromagnetism and abelian 2 form gauge fields are treated in detail The book gives a general and unified treatment of the subject in a self contained manner Exercises are provided at the end of each chapter and pedagogical examples are covered in the text

Handbook of Geometry and Topology of Singularities VI: Foliations Felipe Cano, José Luis Cisneros-Molina, Lê Dũng Tráng, José Seade, 2024-06-20 This is the sixth volume of the Handbook of Geometry and Topology of Singularities a series which aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research Singularities are ubiquitous in mathematics and science in general and singularity theory is a crucible where different types of mathematical problems converge surprising connections are born and simple questions lead to ideas which resonate in other parts of the subject and in other

subjects This Volume VI goes together with Volume V and focuses on singular holomorphic foliations which is a multidisciplinary field and a whole area of mathematics in itself Singular foliations arise for instance by considering The fibers of a smooth map between differentiable manifolds with singularities at the critical points The integral lines of a vector field or the action of a Lie group on a manifold The singularities are the orbits with special isotropy The kernel of appropriate 1 forms The singularities are the zeroes of the form Open books which naturally appear in singularity theory are foliations with singular set the binding These important examples highlight the deep connections between foliations and singularity theory This volume consists of nine chapters authored by world experts which provide in depth and reader friendly introductions to some of the foundational aspects of the theory These introductions also give insights into important lines of further research Volume VI ends with an Epilogue by one of the current world leaders in the theory of complex foliations with plenty of open questions and ideas for further research The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook
