*Hacking His Code* Lark Anderson, 2024-02-13 I must confess I did something very naughty And I haven't learned my lesson I was late on tuition In a mountain of debt And morally obligated to grant my mother's dying wish to get my college degree Which is why I was on the seedy underbelly of the internet cruising for a hacking job I had no idea Hunter Davies the elusive tech giant was watching me and when I passed his little impromptu pop quiz he sent armed men to bring me to his estate And let me tell you he is a piece of work He's disgustingly rich with arrogance in spades He should be in jail for what he's done to me But he offered me a job One that could make all my problems disappear And as much as I hate to admit it he's flippin' other worldly levels of gorgeous Now I have one week to solve a 24 year old cold case or else I go home empty handed Just one catch I have to pretend to be his girlfriend in front of his parents who are itching for grandkids I agree to his terms and somehow one thing leads to another and I wake up in his bed This is not how the job was supposed to go I hate men they can't be trusted But the more I learn about Hunter the less my logic makes sense I'm supposed to be solving one of the greatest mysteries of our time not falling in love And as I'm about to find out if I don't figure this all out soon it could cost us everything

*Hacking Neuroplasticity* Joyce Shaffer, 2024-11-29 Neuroplasticity is the ability of neural networks in the brain to change through growth and reorganization It is when the brain is rewired to function in some way that differs from how it previously functioned How does aging affect neuroplasticity As we grow older plasticity decreases to stabilize what we have already learned What influence does the aging process have on memory Forgetfulness can be a normal part of aging As people get older changes occur in all parts of the body including the brain As a result some people may notice that it takes longer to learn new things they don't remember information as well as they did or they lose things like their glasses This book on evolving neuroscience is unique in its lifespan focus on driving neuroplasticity in a positive direction to influence the Flynn effect of increasing human intelligence as the preferred way to prevent delay onset and or reverse dementia It considers potential impact from the first moments of life through end of life It includes intergenerational activities Its inclusion of centenarians and supercentenarians provides examples of Super Agers who have maintained and or increased neurocognitive capacity often with a health span that approximated their vigorous longevity It discusses the use of the Artificial Intelligence AI revolution to refine personalize and broaden our global reach to enhance the Flynn effect as the preferred effort to improve global statistics on neurocognitive functioning at any age Driving neuroplasticity in a positive direction at all ages is urgent With this book's focus on evidence based interventions at any age which can have physical emotional neurobiological neurochemical immunological and social health benefits it is a unique overview and application of evolving neuroscience to address the UN WHO Decade of Action for Healthy Ageing for All
