Project Finance Bot Projects And Risk:

Project Finance, BOT Projects and Risk Jeffrey Delmon, 2005 Project and other structured finance models have become a method of choice for financing infrastructure projects in many different sectors across the globe They allow greater flexibility for governments and project sponsors wishing to develop infrastructure without the concomitant burden on their balance sheets and their ability to fund other needs and priorities However the fall of Enron WorldCom and so many other organisations who pushed the structured finance model one step too far has raised alarm bells Has project and structured finance seen the end of its useful life Are the risks surrounding such projects so extreme as to bring into question their usefulness The viability of structured infrastructure projects relies on a comprehensive yet sensible assessment of risk and allocation of that risk in an efficient manner Yet our understanding of efficient risk allocation often runs contrary to the actual risk allocation models that we apply to such projects Risk analysis for complex projects requires a level of sophistication and objectivity of which few individuals are capable Jeff Delmon's book addresses the many issues around risk and structured infrastructure projects It is not a dry legal treatise but an eminently readable and practical explanation of efficient risk allocation and the contractual framework which forms the bedrock of BOT and other project finance transactions Based on Jeff's practical experience in the sector this book provides practical guidance and insight into many of the pitfalls often encountered in such projects This book is ideal for those relatively new to the issues surrounding project finance and risk as well as those with significant experience as an aide memoire and a challenge to the approaches to risk allocation that are so often applied to such transactions

Public-private Partnerships, 2006 Introduction Denton Wilde Sapte's *Project Finance The Guide to Financing Build Operate Transfer Projects* is the successful practical guide to the financing of worldwide infrastructure projects using build operate transfer techniques is now in its second edition Fully updated and with the new title of *Public Private Partnerships BOT Techniques and Project Finance* this essential text has been revised to include Equity bridge financing and Islamic financing techniques The current PFI situation Additional terms and conditions in PFI transactions The effect of changes in UK tax law and regulatory changes and Project finance cover for export credit agencies development of PPP The different issues surrounding the concepts of economic viability and financial viability of BOT projects The key to managing tenders both from the public sector side and for prospective tenderers The different contractual structures available identifying the appropriate allocation of benefits and risks associated with a new infrastructure project The terms to include in the all important concession agreement The various sources of finance available and Finance documentation Recent years have seen a dramatic increase worldwide in the involvement of the private sector in the development and funding of public facilities and services and techniques are continuously being developed to draw the public and private sectors together with a view to sharing the risks and rewards associated with such activities partnerships PPPs and range from the simple contracting out of services to the involvement of the private sector in

the financing design construction operation maintenance and in some cases ownership of major infrastructure facilities This book is concerned with the latter commonly referred to as BOT projects Although BOT is often used to describe the specific build operate transfer technique of infrastructure development under which the private sector finances constructs operates and maintains the facilities for a given period with the public sector acquiring operational control at the end of that period the expression is given its wider meaning in this book and is used to refer to all types of infrastructure projects which involve private sector investment and funding There are many factors contributing to the PPP trend funds available for the development of large scale and capital intensive infrastructure projects while at the same time increasingly perceiving the need for infrastructure facilities to promote economic growth in the shortest possible timescale BOT structures also allow the public sector to transfer onto the private sector many of the risks associated with the implementation of these projects For private sector investors and financiers BOT projects have opened up a whole new area of opportunities for new business and relatively high returns The sharing of risks with other parties to the project and with the public sector entity concerned enhances the appeal of BOT One aspect of many BOT projects which is attractive to investors and financiers is that they incorporate sovereign credit risk and this renders them more suitable for financing in the bond markets For a BOT project to succeed it must be sufficiently attractive to both the public and private sectors If the risks are felt to be too great or to outweigh the potential benefits and returns the project will not proceed flexible in terms of the types of project in which they will participate and will now consider financing a project the revenue stream of which is market based rather than assured under a long term contract with a creditworthy purchaser Over recent years much has been learned by both the public and the private sectors as to the types and extent of project risk which the other will bear and this knowledge is being used to accelerate the implementation of BOT projects in general Additionally repayment periods have lengthened considerably for BOT projects in developed markets in turn making them more attractive for project developers The development of secondary markets for debt and equity in these markets has increased liquidity and enabled lenders to recirculate their investments The spread of guarantees of project bonds being given by monoline insurers with strong credit rating has attracted new sources of funding Many countries with developed economies have made substantial use of BOT techniques in 1992 BOT projects with a value of GBP 48.3 billion had been signed by March 2006 of which about one half represented transport projects In the emerging markets however the implementation of BOT projects has progressed more slowly than expected This has largely been as a result of the perceived political risks associated with such projects and the difficulties and delays which have been experienced in relation to many of them As governments of emerging markets countries become more accustomed to the requirements of foreign investors and financiers recognise that the BOT approach is increasingly the way in which the international markets expect infrastructure to be developed and operated the implementation of BOT projects will become easier and quicker thereby encouraging further projects This work covers the basis of BOT techniques

and their potential advantages and disadvantages for the participants in these projects projects of this type and also covers in some detail project viability and public private sector risk allocation issues procurement procedures concession agreements and the sources of financing available for these projects In a book of this type it is possible only to give a general overview of BOT structures and the issues involved It should be borne in mind that every project is unique and the statements contained in this publication will not be equally applicable to all BOT projects There is no substitute for taking appropriate advice on each individual project

BOT-Projects in Asia Ursula Katharina Wolter, 2006-08-03 Inhaltsangabe Abstract The rapidly developing economies in Asia are undergoing unprecedented growth This explosive development has placed incomparable demands on the existing infrastructure in many countries Governments struggle with the challenge of providing modern efficient and affordable infrastructure services for their people finding it difficult to finance what are often multimillion dollar projects on their own Involving the private sector in the financing and operation of infrastructure

promises several benefits for both parties With a share of over eleven percent in German foreign trade exports to Asia are in terms of volume now two percent higher than those to the USA Many German companies have taken on public private partnerships as a form of cooperation and thus play a part in the sustainable development of the Asian economies To date the most common sub type of private participation in infrastructure is the BOT Build Operate Transfer model where a project company finances and constructs new infrastructure and operates that infrastructure over a long term period before it is transferred back to the government But despite the long history of projects of this type only a few are very successful and usually mean more costs than income to the companies Eurotrain a joint venture between rail giants Alstom and Siemens proved in May 1998 it was ready to build Taiwan s US 14 billion high speed rail BOT project with a successful test run of its integrated train system in Germany The only problem was that after at least a two year effort the Taiwan High Speed Rail Corporation THSRC suddenly decided to give the core contracts to the Japanese Shinkansen Consortium THSRC has yet to explain why Eurotrain was not given a chance to match Shinkansen s offer De facto ambassadors from Germany France and even the CEO s of the companies met with THSRC s chairwoman Nita Ing who failed to provide any explanation whatsoever for this change of plan BOT projects are extensive in nature with the companies therefore always finding themselves in international competition and or having to forge global partnerships to get the project done They have to be aware of every single potential local and global risk which could threaten the whole project not only to ensure that the project is won but also to successfully complete it For huge companies there is often the difficulty that risks are misjudged meaning that projects
