Projective Relativity Cosmology And Gravitation:

Projective Relativity, Cosmology, and Gravitation Giuseppe Arcidiacono, 1986 *Applications of Mathematics in Models, Artificial Neural Networks and Arts* Vittorio Capecchi, Massimo Buscema, Pierluigi Contucci, Bruno D'Amore, 2010-08-03 The book shows a very original organization addressing in a non traditional way but with a systematic approach to who has an interest in using mathematics in the social sciences The book is divided in four parts a a historical part written by Vittorio Capecchi which helps us understand the changes in the relationship between mathematics and sociology by analyzing the mathematical models of Paul F Lazarsfeld the model of simulation and artificial societies models of artificial neural network and considering all the changes in scientific paradigms considered b a part coordinated by Pier Luigi Contucci on mathematical models that consider the relationship between the mathematical models that come from physics and linguistics to arrive at the study of society and those which are born within sociology and economics c a part coordinated by Massimo Buscema analyzing models of artificial neural networks d a part coordinated by Bruno D Amore which considers the relationship between mathematics and art The title of the book Mathematics and Society was chosen because the mathematical applications exposed in the book allow you to address two major issues a the general theme of technological innovation and quality of life among the essays are on display mathematical applications to the problems of combating pollution and crime applications to mathematical problems of immigration mathematical applications to the problems of medical diagnosis etc b the general theme of technical innovation and creativity for example the art and mathematics section which connects to the theme of creative cities The book is very original because it is not addressed only to those who are passionate about mathematical applications in social science but also to those who in different societies are involved in technological innovation to improve the quality of life b involved in the wider distribution of technological innovation in different areas of creativity as in the project Creative Cities Network of UNESCO *De Sitter Projective Relativity* Ignazio Licata, Leonardo Chiatti, Elmo Benedetto, 2017-03-13 This book presents the Projective approach to de Sitter Relativity It traces the development of renewed interest in models of the universe at constant positive curvature such as vacuum geometry The De Sitter Theory of Relativity formulated in 1917 with Willem De Sitter's solution of the Einstein equations was used in different fields during the 1950s and 1960s in the work of H Bacry J M LevyLeblond and F Gursey to name some important contributors From the 1960s to 1980s L Fantappi and G Arcidiacono provided an elegant group approach to the De Sitter universe putting the basis for special and general projective relativity Today such suggestions flow into a unitary scenario and this way the De Sitter Relativity is no more a missing opportunity F Dyson 1972 but has a central role in theoretical physics In this volume a systematic presentation is given of the De Sitter Projective relativity with the recent developments in projective general relativity and quantum cosmology **Chemical Cosmology** Jan C. A. Boeyens, 2010-09-02 The composition of the most remote objects brought into view by the Hubble telescope can no longer be

reconciled with the nucleogenesis of standard cosmology and the alternative explanation in terms of the Cold Dark Matter model has no recognizable chemical basis A more rational scheme based on the chemistry and periodicity of atomic matter opens up an exciting new interpretation of the cosmos in terms of projective geometry and general relativity The response of atomic structure to environmental pressure predicts non Doppler cosmical redshifts and equilibrium nucleogenesis by particle addition in accord with observed periodic variation of nuclear abundance Inferred cosmic self similarity elucidates the Bode Titius law general commensurability in the solar system and the occurrence of quantum phenomena on a cosmic scale The generalized periodic function involves both matter and anti matter in an involuted mapping to a closed projective plane This topology ensures the same symmetrical balance in a chiral universe wrapped around an achiral vacuum interface without singularities A new cosmology emerges based on the theory of projective relativity presented here as a translation of Veblen's original German text Not only does it provide a unification of gravity electromagnetism and quantum theory through gauge invariance but also supports the solution of the gravitational field equations obtained by ∇G for a rotating universe The appearance of an Einstein Rosen bridge as outlet from a black hole into conjugate anti space accounts for globular clusters quasars cosmic radiation ray bursters pulsars radio sources and other regions of plasma activity The effects of a multiply connected space time manifold on observations in an Euclidean tangent space are unpredictable and a complete reassessment of the size and structure of the universe is indicated The target readership includes scientists as well as non scientists everybody with a scientific or philosophical interest in cosmology and especially those cosmologists and mathematicians with the ability to recast the crude ideas presented here into appropriate mathematical models

Hadronic Journal Supplement, 1986 **Advances in the Interplay Between Quantum and Gravity Physics** Peter G. Bergmann, V. de Sabbata, 2012-12-06 In this XVII Course of the International School of Cosmology and Gravitation devoted to ADVANCES IN THE INTERPLAY BETWEEN QUANTUM AND GRAVITY PHYSICS we have considered different aspects of the influence of gravity on quantum systems In order to achieve this aim in many lectures seminars and discussions we have strengthened the interplay between gravity and quantum systems starting from the situation in the early universe based on astrophysical observations up to the earthly based experiments with atom interferometry for probing the structure of space time Thus we have had timely lectures on the quantum field and horizon of a black hole including reviews of the problem of black holes thermodynamics and entropy quantum information quantum black holes quantum evaporation and Hawking radiation recent advances in stochastic gravity We have also discussed quantum fluctuations in inflationary universe quantum effects and reheating after inflation and superplanckian energies in Hawking radiation In this regard the subject of spinors in purely affine space time and Dirac matter according to Weyl in the generalized theory of gravitation were developed The dualism between space time and matter has been deeply analyzed in order to see why for general relativity this is an obstacle for quantization of the theory Also canonical Gravity and Mach's principle torsion and curvature as commutator for Quantum
