Progress in Intercalation Research H.W. de Jong, 2013-12-01 If a book needs a third edition because the previous ones are sold out one may well question whether an introduction is necessary However the Structure of European Industry was meant to be a flexible book keeping it in tune with actual developments in the European Community Some explanation is therefore required Two new chapters on the services industry have been included to recognize the growing importance of what is fundamentally a bundle of industries It is also increasingly acknowledged that the motorcar industry for its efficiency and innovativeness is very much dependent on the numerous suppliers large and small of the component parts industry A chapter reflecting on the strengths and weaknesses of the European car supplying industries is therefore most welcome Finally European competition policy now fitted out with the Merger Control Regulation is moving more and more towards the centre of stage and the final chapter presents a survey of the aims and achievements of this type of policy up till now steadfastly developed by the EC Commission For the rest the chapters which were already in the previous edition have been updated and have partly been rewritten by the authors concerned The editor is most grateful to old and new contributors for their efforts to jointly produce a book which after 12 years is still unique in providing a European instead of a national focus on industries and markets

Progress in Intercalation Research W. Müller-Warmuth, R. Schöllhorn, 2012-12-06 The combination of solid materials of different structural dimensionality with atomic or molecular guest species via intercalation processes represents a unique and widely variable low temperature synthesis strategy for the design of solids with particular composition structure and physical properties In the last decade this field has experienced a rapid development and represents now an established specific domain of solid state research and materials science Substantial progress has been made with respect to an understanding of the complex relationship between structure bonding physical properties and chemical reactivity since the first volume on the subject appeared in this series in 1979 *Intercalated Layered Materials* F Levy ed The purpose of this volume is to present a survey on progress and perspectives based on the treatment of a series of major areas of activities in this field By the very nature of its subject this monograph has an interdisciplinary character and addresses itself to chemists physicists and materials scientists interested in intercalation research and related aspects such as design and characterization of complex materials low temperature synthesis solid state reaction mechanisms electronic ionic conductivity control of electronic properties of solids with different structural dimensionality and application of intercalation systems Several chapters have been devoted to specific groups of host lattices
