## **Projective Differential Geometry Old And New:**

**Projective Differential Geometry Old and New** V. Ovsienko, S. Tabachnikov, 2004-12-13 Ideas of projective geometry keep reappearing in seemingly unrelated fields of mathematics The authors main goal in this 2005 book is to emphasize connections between classical projective differential geometry and contemporary mathematics and mathematical physics They also give results and proofs of classic theorems Exercises play a prominent role historical and cultural comments set the basic notions in a broader context The book opens by discussing the Schwarzian derivative and its connection to the Virasoro algebra One dimensional projective differential geometry features strongly Related topics include differential operators the cohomology of the group of diffeomorphisms of the circle and the classical four vertex theorem The classical theory of projective hypersurfaces is surveyed and related to some very recent results and conjectures A final chapter considers various versions of multi dimensional Schwarzian derivative In sum here is a rapid route for graduate students and researchers to the frontiers of current research in this evergreen subject

**Projective differential geometry of curves and ruled surfaces** Ernest Julius Wilczynski, 1960 **Surveys in Modern Mathematics** Victor Prasolov, Yulij Ilyashenko, 2005-04-14 This collection of articles from the Independent University of Moscow is derived from the Globus seminars held there They are given by world authorities from Russia and elsewhere in various areas of mathematics and are designed to introduce graduate students to some of the most dynamic areas of mathematical research The seminars aim to be informal wide ranging and forward looking getting across the ideas and concepts rather than formal proofs and this carries over to the articles here Topics covered range from computational complexity algebraic geometry dynamics through to number theory and quantum groups The volume as a whole is a fascinating and exciting overview of contemporary mathematics **From Frenet to Cartan: The Method of Moving Frames** Jeanne N. Clelland, 2017-03-29 The method of moving frames originated in the early nineteenth century with the

notion of the Frenet frame along a curve in Euclidean space Later Darboux expanded this idea to the study of surfaces The method was brought to its full power in the early twentieth century by Elie Cartan and its development continues today with the work of Fels Olver and others This book is an introduction to the method of moving frames as developed by Cartan at a level suitable for beginning graduate students familiar with the geometry of curves and surfaces in Euclidean space The main focus is on the use of this method to compute local geometric invariants for curves and surfaces in various 3 dimensional homogeneous spaces including Euclidean Minkowski equi affine and projective spaces Later chapters include applications to several classical problems in differential geometry as well as an introduction to the nonhomogeneous case via moving frames on Riemannian manifolds The book is written in a reader friendly style building on already familiar concepts from curves and surfaces in Euclidean space A special feature of this book is the inclusion of detailed guidance regarding the use of the computer algebra system Maple to perform many of the computations involved in the exercises
