Properties Of Gallium Arsenide:

Properties of Gallium Arsenide, 1986 *Properties of Aluminium Gallium Arsenide* Sadao Adachi, 1993 The alloy system AlGaAs GaAs is potentially of great importance for many high speed electronics and optoelectronic devices because the lattice parameter difference GaAs and AlGaAs is very small which promises an insignificant concentration of undesirable interface states Thanks to this prominent feature a number of interesting properties and phenomena such as high mobility low dimensional carrier gases resonant tunnelling and fractional quantum Hall effect have been found in the AlGaAs GaAs heterostructure system New devices such as modulation doped FETs heterojunction bipolar transistors resonant tunnelling transistors quantum well lasers and other photonic and quantum effect devices have also been developed recently using this material system These areas are recognized as not being the most interesting and active fields in semiconductor physics and device engineering **Properties of Gallium Arsenide** INSPEC., 1986 **Electrical properties of gallium arsenide** Tin

Stanford Electronics Laboratories, David J. Dumin, 1964 The forward and reverse current voltage characteristics of zinc diffused GaAs diodes were investigated at temperatures between 300 and 4.2 K This study was initiated to explain the portions of the forward and reverse currents that are nonthermal in origin Zinc diffused GaAs diodes were produced and tested at temperatures between 300 and 4.2 K The doping densities of the parent materials ranged from 5×10^{15} to the 15th power cm to 10^{19} cm to the 19th power cm to the 3rd power In addition to undoped n type material parent materials doped with selenium sulfur and tellurium were used The high temperature forward current was explained in terms of existing thermal models using minority carrier lifetimes of the order of 10 to the 9th power to 10 to the 10th power sec and minority carrier diffusion lengths of the order of 5 microns The low temperature forward current was explained in terms of a band to trap to band excess tunnelling model describable by two parameters the effective tunnelling mass and the recombination probability The reverse current was explained in terms of a band to band tunnelling model at all temperatures below 300 K Author
