Perceptions and Representations Keith Oatley, 2017-03-16 Originally published in 1978 this study examines the shortcomings of some theoretical approaches to psychological and neurophysiological mechanisms at the time Keith Oatley illustrates the extent of these shortcomings by showing how inefficient brain researchers using their present approaches would be in trying to understand a computer which is considerably simpler than the human brain He concludes that we need better theories than those usually espoused in psychology and goes on to expound a theory of cognitive representation and inference in perception which began with Helmholtz more than a hundred years ago but which can now be given substance and formal structure in artificial intelligence programs The author deploys this theory to give an account of some fundamental problems such as how we see a three dimensional world and how the brain copes so well with incomplete sensory data and with damage to its own components *Perception and Representation* Ilona Roth, John P. Frisby, 1986

**Suspensions of Perception** Jonathan Crary, 2001-08-24 *Suspensions of Perception* decisively relocates the problem of aesthetic contemplation within a broader collective encounter with the unstable nature of perception in psychology philosophy neurology early cinema and photography *Suspensions of Perception* is a major historical study of human attention and its volatile role in modern Western culture It argues that the ways in which we intently look at or listen to anything result from crucial changes in the nature of perception that can be traced back to the second half of the nineteenth century Focusing on the period from about 1880 to 1905 Jonathan Crary examines the connections between the modernization of subjectivity and the dramatic expansion and industrialization of visual auditory culture At the core of his project is the paradoxical nature of modern attention which was both a fundamental condition of individual freedom creativity and experience and a central element in the efficient functioning of economic and disciplinary institutions as well as the emerging spaces of mass consumption and spectacle Crary approaches these issues through multiple analyses of single works by three key modernist painters Manet Seurat and Cezanne who each engaged in a singular confrontation with the disruptions vacancies and rifts within a perceptual field Each in his own way discovered that sustained attentiveness rather than fixing or securing the world led to perceptual disintegration and loss of presence and each used this discovery as the basis for a reinvention of representational practices *Suspensions of Perception* decisively relocates the problem of aesthetic contemplation within a broader collective encounter with the unstable nature of perception in psychology philosophy neurology early cinema and photography In doing so it provides a historical framework for understanding the current social crisis of attention amid the accelerating metamorphoses of our contemporary technological culture

*Leibniz: Representation, Continuity and the Spatiotemporal* D.A. Anapolitanos, 2013-03-09 Anapolitanos critically examines and evaluates three basic characteristics of the Leibnizian metaphysical system Leibniz's version of representation the principle of continuity and space time and the phenomenally spatio temporal Chapter I discusses representation especially as it refers to the connection between the real and the phenomenal levels of Leibniz's system Chapter II examines the principle of continuity including continuity as a general feature of every level of Leibniz's metaphysics The position adopted is that the problem of the composition of the continuum played a central role on the development of Leibniz's non spatial and non temporal monadic metaphysics The machinery developed is then used to offer a new interpretation of Leibniz metaphysics of space and time The notion of indirect representation is used to construct appropriate models that clarify the nature of the correspondence between the real and the phenomenal levels in the case of the relations spatially between and temporally between as well as in the cases of spatial and temporal density Finally Leibniz's solution to the problem of the continuum is discussed arguing that it is not entirely satisfactory A non anachronistic alternative is proposed compatible with
