Perceptual And Associative Learning:

Perceptual and Associative Learning Geoffrey Hall,1991-11-28 Traditional theories of associative learning have found no place for the possibility that the way in which events are perceived might change as a result of experience Evidence for the reality of perceptual learning has come from those studied by learning theorists The work reviewed in this book shows that learned changes in perceptual organization can in fact be demonstrated even in experiments using procedures such as conditioning and simple discrimination learning of the type on which associative theories have been based These results come from procedures that have been the focus of detailed theoretical and empirical analysis and from this analysis emerges an outline of the mechanisms responsible Some of these are themselves associative others require the addition of nonassociative mechanisms to the traditional theory The result is an extended version of associative theory which it is argued will be relevant not only to the experimental procedures discussed in this book but to the entire range of instances of perceptual learning Effects of Associative Learning on Perceptual Judgments and Memory Search Lien-chong Mou,1983

The Oxford Handbook of Auditory Science: The Auditory Brain David R. Moore,Paul Albert Fuchs,Adrian Rees,Alan Palmer,Christopher J. Plack,2010-01-21 Volume 1 The Ear edited by Paul Fuchs Volume 2 The Auditory Brain edited by Alan Palmer and Adrian Rees Volume 3 Hearing edited by Chris Plack Auditory science is one of the fastest growing areas of biomedical research There are now around 10 000 researchers in auditory science and ten times that number working in allied professions This growth is attributable to several major developments Research on the inner ear has shown that elaborate systems of mechanical transduction and neural processes serve to improve sensitivity sharpen frequency tuning and modulate response of the ear to sound Most recently the molecular machinery underlying these phenomena has been explored and described in detail The development maintenance and repair of the ear are also subjects of contemporary interest at the molecular level as is the genetics of hearing disorders due to cochlear malfunctions **Perceptual and Functional Categorisation in Associative Learning** Christopher S. Grand,2007 The Human Auditory System Gastone G. Celesia,Gregory Hickok,2015-03-06 The Human Auditory System Fundamental Organization and Clinical Disorders provides a comprehensive and focused reference on the neuroscience of hearing and the associated neurological diagnosis and treatment of auditory disorders This reference looks at this dynamic area of basic research a multidisciplinary endeavor with contributions from neuroscience clinical neurology cognitive neuroscience cognitive science communications disorders and psychology and its dramatic clinical application A focused reference on the neuroscience of hearing and clinical disorders Covers both basic brain science key methodologies and clinical diagnosis and treatment of audiology disorders Coverage of audiology across the lifespan from birth to elderly topics *Updates on multisensory perception: from neurons to cognition* Angelo Maravita,Nadia Bolognini, In recent years there has been a dramatic progress in understanding how stimuli from different sensory modalities are integrated among each other Multisensory integration results in a unitary

representation of the world that strongly characterizes perception and cognition in humans Knowledge about multi sensory integration has research techniques and approaches including neurophysiology experimental psychology neuropsychology neuroimaging and computational modelling This special issue aims at presenting an up to date integrative overview of the physiological psychological developmental and functional processes associated with multisensory integration The proposed collection of papers is organized thematically into sections each featuring a state of the art review of key themes in multisensory research from more approaches in the animal to the study of multisensory perception and cognition in humans Specifically this special issue will consider The physiological mechanisms of multisensory processing in cortical and subcortical brain structures of model animal species rat cat and monkey current biologically inspired computational modelling of multisensory integration evidence about the multisensory contributions to perception in humans as highlighted by psychophysical and neuropsychological evidence the neural basis of multisensory processing in the human brain uncovered by recent neuroimaging techniques including EEG PET fMRI the consequences of the breakdown of normal sensory integration as shown by studies with techniques of brain stimulation in humans developmental processes of multisensory perception in humans and the constraints for the emergence of multisensory processes in relation to sensory experience the issue of crossmodal neuroplasticity concerning behavioral and neural changes following sensory deprivation The challenge of this Research Topic is to provide an interdisciplinary context allowing to understand the basic principles of multisensory integration in humans and the key issues that this fascinating field of study rises for future research

Perception-Cognition Interface & Cross-Modal Experiences: Insights into Unified Consciousness Aleksandra

Mroczko-Wąsowicz, 2017-01-26 The present Research Topic explores closely related aspects of mental functioning namely an interplay between perception and cognition interactions among various sensory modalities and finally more or less unified conscious experiences arising in the context of these relations Contributions emphasize a high flexibility observed in perception and may be seen as potential challenges to the traditional modular architecture of perceptual systems Although the articles describe different phenomena they follow one common theme to investigate broadly understood unified experience by studying either perception cognition integration or the integration between sensory modalities These integrative processes may well apply to subpersonal unconscious representations However the aim here is to approach phenomenal experience and thus a straightforward way of thinking about it is in terms of conscious perception Putting together scientific and philosophical concerns this special issue encourages extending the study of perceptual experience beyond the single sense perception to advance our understanding of the complex interdependencies between different sensory modalities other mental domains and various kinds of unifying relations within conscious experience It exhibits a remarkable need to study these phenomena in tangent and so the authors examine a variety of ways in which our perceptual experiences may be cross modal or multisensory integrated embodied synesthetic cognitively penetrated or otherwise

affected by top down influences The Research Topic comprises theoretical and empirical contributions of such fields as philosophy of mind cognitive science psychology and neuroscience in the form of hypothesis and theory articles original research articles opinion papers reviews and commentaries

Spatial Biases in Perception and Cognition Timothy L. Hubbard, 2018-08-23 Our experience of the world is influenced by numerous spatial biases most of which influence us without our being aware of them These biases are related to illusions and asymmetries in our perception of space relationships between space and other qualities dynamics of moving objects dynamics of scene configuration and dynamics related to perception and action Consideration of these biases provides insight into how we perceive remember and navigate space as well as how we interact with objects and people in space This volume introduces and reviews numerous spatial biases and provides descriptions and examples of each bias The contributors discuss historical and current theories for many biases and for some biases provide new explanatory theories Providing a one stop shop for information on such a key aspect of our experience in the world this volume will interest anyone curious about our understanding of space
