Performance Guarantees In Communication Networks:

Performance Guarantees in Communication Networks Cheng-Shang Chang, 2000 Providing performance guarantees is one of the most important issues for future telecommunication networks This book describes theoretical developments in performance guarantees for telecommunication networks from the last decade Written for the benefit of graduate students and scientists interested in telecommunications network performance this book consists of two parts The first introduces the recently developed filtering theory for providing deterministic hard guarantees such as bounded delay and queue length The filtering theory is developed under the min plus algebra where one replaces the usual addition with the min operator and the usual multiplication with the addition operator As in the classical linear system theory the filtering theory treats an arrival process or a departure process as a signal and a network element as a system Network elements including traffic regulators and servers can be modelled as linear filters under the min plus algebra and they can be joined by concatenation filter bank summation and feedback to form a composite network element The problem of providing deterministic guarantees is equivalent to finding the impulse response of composite network elements This section contains material on s r calculus Filtering theory for deterministic traffic regulation service guarantees and networks with variable length packets Traffic specification Networks with multiple inputs and outputs Constrained traffic regulation The second part of the book addresses stochastic soft guarantees focusing mainly on tail distributions of queue lengths and packet loss probabilities and contains material on s q r q calculus and q envelope rates The large deviation principle The theory of effective bandwidth The mathematical theory for stochastic guarantees is the theory of effective bandwidth Based on the large deviation principle the theory of effective bandwidth provides approximations for the bandwidths required to meet stochastic guarantees for both short range dependent inputs and long range dependent inputs

Communication Networks R. Srikant, Lei Ying, 2013-11-14 Provides a modern mathematical approach to the design of communication networks for graduate students blending control optimization and stochastic network theories A broad range of performance analysis tools are discussed including important advanced topics that have been made accessible to students for the first time Taking a top down approach to network protocol design the authors begin with the deterministic model and progress to more sophisticated models Network algorithms and protocols are tied closely to the theory illustrating the practical engineering applications of each topic The background behind the mathematical analyses is given before the formal proofs and is supported by worked examples enabling students to understand the big picture before going into the detailed theory End of chapter problems cover a range of difficulties with complex problems broken into several parts and hints to many problems are provided to guide students Full solutions are available online for instructors

NETWORKING 2004: Networking Technologies, Services, and Protocols; Performance of Computer and Communication Networks; Mobile and Wireless Communications Nikolas Mitrou, Kimon Kontovasilis, George Rouskas, Ilias Iliadis, Lazaros Merakos, 2004-04-08 This book contains the refereed proceedings of the 3rd International IFIP TC6 Networking Conference Networking 2004 Conferences in the Networking series span the interests of several distinct but related TC6 working groups including Working Groups 6.2, 6.3 and 6.8 Re ecting this the conference was structured with three Special Tracks i Networking Technologies Services and Protocols ii Performance of Computer and Communication Networks and iii Mobile and Wireless

Communications However beyond providing a forum for the presentation of high quality search in various complementary aspects of networking the conference was also targeted to contributing to a unified view of the field and to fostering the interaction and exchange of fruitful ideas between the various related and overlapping specialized subcommunities therein Towards this second objective more than a few conference sessions and thematic sections in this book cut across the Special Tracks along more generic or fundamental concepts Networking 2004 was fortunate to attract very high interest among the community and the conference received 539 submissions from 44 countries in all five continents These figures correspond to a remarkable increase in submissions from the previous very successful events roughly a 156% increase over Networking 2000 and 71% over Networking 2002 and indicate that Networking conferences are progressively becoming established as worldwide reference events in the field
