Peripheral And Spinal Mechanisms In The Neural Control Of Movement:

Peripheral and Spinal Mechanisms in the Neural Control of Movement M.D. Binder, 1999-12-17 In the last decade we have witnessed a striking maturation of our understanding of how neurons in the spinal cord control muscular activity and movement Paradoxically a host of new findings have revealed an unexpected versatility in the behavior of these well studied neural elements and circuits In this volume the world s leading experts review the current state of our knowledge of motor control outline their latest results and developments and delineate the seminal unresolved questions in this vibrant field of research The volume begins with a commentary and overview of our current understanding of the peripheral and spinal basis of motor control The remainder of the volume is divided into seven sections each focused on a different problem The first chapter in each section provides some historical review and presages the experimental findings and hypotheses that are discussed in subsequent chapters Topics include the biomechanics of neuromuscular systems the properties of motoneurons and the muscle units they control spinal interneurons pattern generating circuits locomotion descending control of spinal circuits comparative physiology of motor systems and motor systems neurophysiology studied in man The book serves as a unique reference volume and should be essential reading for anyone interested in motor systems Moreover the volume s comprehensive coverage of a wide range of topics make it an effective textbook for graduate level courses in motor control neurobiology kinesiology physical therapy and rehabilitation medicine Sensorimotor Control of Movement and Posture Simon C. Gandevia, Uwe Proske, Douglas G. Stuart, 2012-12-06 This collection of contributions on the subject of the neural mechanisms of sensorimotor control resulted from a conference held in Cairns Australia September 3-6 2001 While the three of us were attending the International Union of Physiological Sciences IUPS Congress in St Petersburg Russia in 1997 we discussed the implications of the next Congress being awarded to New Zealand We agreed to organise a satellite to this congress in an area of mutual interest the neuroscience of movement and sensation Australia has a long standing and enviable reputation in the field of neural mechanisms of sensorimotor control Arguably this reached its peak with the award of a Nobel Prize to Sir John Eccles in 1963 for his work on synaptic transmission in the central nervous system Since that time the subject of neuroscience has progressed considerably One advance is the exploitation of knowledge acquired from animal experiments to studies on conscious human subjects In this development Australians have achieved international prominence particularly in the areas of kinaesthesia and movement control This bias is evident in the choice of subject matter for the conference and subsequently this book It was also decided to assign a whole section to muscle mechanics a subject that is often left out altogether from conferences on motor control Cairns is a lovely city and September is a good time to visit it *Neural Control of Space Coding and Action Production* C. Prablanc, D. Pélisson, Y. Rosetti, 2003-02-28 Clinical neuropsychology has evolved by integrating in its field the knowledge derived from neuroanatomical electrophysiological and psychophysical data and has led to the development of rehabilitation tools This volume tries to link

the new concepts and discoveries in the field of sensorimotor coordination It contains the main contributions of participants of an international symposium held in Lyon in 2001 entitled Neural control of space coding and action production The book emphasizes the reciprocal relationship between perception and action and the essential role of active sensorimotor organization or reorganization in building up perceptual and motor representations of the self and of the external world
