Retinoid Protocols:

Retinoids Heinz Nau, William S. Blaner, 2012-12-06 In the future the decade of the 1990s will likely be viewed as a Golden Age for retinoid research There have been unprecedented research gains in the understanding of retinoid actions and physiology since the retinoid nuclear receptors were first identified and the importance of retinoic acid in developmental processes was first broadly recognized in the late 1980s Between then and now our knowledge of retinoid action has evolved from one of a near complete lack of understanding of how retinoids act within cells to one of sophisticated understanding of the molecular processes through which retinoids modulate transcription In this volume we have tried to provide a comprehensive update of the present understanding of retinoid actions with an emphasis on recent advances The initial chapters of the volume or Section A focus on the physicochemical properties and metabolism of naturally occurring retinoids N OY provides an uncommonly encountered view of retinoid effects from the perspective of the physiochemical properties of retinoids V AKIANI and BUCK lend a perspective on the biological occurrence and actions of retro and anhydro retinoids Section B considers both the retinoid nuclear receptors and their mechanisms of action as well as synthetic retinoids that have been used experimentally to provide mechanistic insights into receptor actions and have potential therapeutic use for treating disease PIEDRAFITA and PFAHL provide a comprehensive review of retinoid nuclear receptor biochemistry and molecular biology

Retinoid Protocols Christopher Redfern, 1998-01-16 Interest in retinoic acid the main biologically active derivative of vitamin A or retinol increased dramatically between 1989 and 1993 following the cloning of nuclear receptors or RARs reported in 1987 Fig 1 Important discoveries since then have shown how RARs work as all trans retinoic acid dependent heterodimers with related nuclear receptors for 9 cis retinoic acid called RXRs This has stimulated the development of synthetic analogs specific for each type of receptor and opens the way to develop new methods for regulating pharmacologically the activity of retinoic acid dependent pathways of gene activation The potential for the development of new drugs by the pharmaceutical industry is now a major factor driving forward our understanding of vitamin A regulated pathways in animal development and homeostasis However apart from the real potential of retinoid analogs as novel pharmacological agents there remains the considerable intellectual challenge of understanding the way in which vitamin A and its derivatives function in cell development and differentiation Retinoid Protocols is an attempt to bring together various methodologies that will be vital for rising to this challenge in the future Retinoid molecular biology has few methods of its own but is reliant on standard molecular biology methods applied to this particular research area

Immunocytochemical Methods and Protocols Lorette C. Javois, 2008-02-02 Lorette Javois timely new 2nd edition revises and updates her widely acclaimed collection of step by step immunocytochemical methods one that is now used in many biological and biomedical research programs The methods are designed for researchers and clinicians who wish to visualize molecules in plant or animal embryos tissue sections cells or organelles In addition to cutting edge protocols for purifying and preparing

antibodies light microscopic analysis confocal microscopy FACS and electron microscopy this revised edition contains many new methods for applying immunocytochemical techniques in the clinical laboratory and in combination with in situ hybridization

Retinoids IARC Working Group on the Evaluation of Cancer-preventive Agents, World Health Organization, International Agency for Research on Cancer, 1999 The retinoids are a class of compounds structurally related to Vitamin A In the last 30 years more than 2 500 retinoids have been synthesized and biologically tested with the objective of identifying those with an enhanced therapeutic ratio The majority have been studied for their cancer preventive activity in experimental models and some in clinical trails in humans On 24 30 March 1999 a working group of international experts met in Lyon to consider the existing evidence on the cancer preventive activity of nine retinoids judged to have sufficient human and or animal data to permit evaluation This handbook details the evidence considered and summarizes the evaluation made by the working group

Integrin Protocols Anthony R. Howlett, 2008-02-03

Molecular Methods in Developmental Biology Matt Guille, 2008-02-03 The process whereby a single cell the fertilized egg develops into an adult has fascinated for centuries Great progress in understanding that process has ever been made in the last two decades when the techniques of molecular biology have become available to developmental biologists By applying these techniques the exact nature of many of the interactions responsible for forming the body pattern are now being revealed in detail Such studies are a large and it seems ever expanding part of most life science groups It is at newcomers to this field that this book is primarily aimed A number of different plants and animals serve as common model organisms for developmental studies In **Molecular Methods in Developmental Biology** *Xenopus* and Zebrafish a range of the molecular methods applicable to two of these organisms are described these are the South African clawed frog *Xenopus laevis* and the zebrafish *Brachydanio rerio* The embryos of both of these species develop rapidly and externally making them particularly suited to investigations of early vertebrate development However both *Xenopus* and zebrafish have their own advantages and disadvantages *Xenopus* have large robust embryos that can be manipulated surgically with ease but their pseudotetraploidy and long generation time make them unsuitable candidates for genetics This disadvantage may soon be overcome by using the diploid *Xenopus tropicalis* and early experiments are already underway The transparent embryos of zebrafish render them well suited for in situ hybridization and immunohistochemistry and good for observing mutations in genetic screens
