Problems And Methods In Longitudinal Research Stability And Change:

Problems and Methods in Longitudinal Research: Stability and Change David Magnusson, 1989 Problems and Methods in Longitudinal Research David Magnusson, Lars R. Bergman, Georg Rudinger, 1991-12-12 Longitudinal research or observing the same subject across time in human development requires more careful planning than do cross sectional studies and is demanding theoretically and organizationally This volume focuses on methods of data treatment in longitudinal research emphasizing the importance of careful matching of methodology to the substantive problem under consideration It deals particularly with concepts of stability and change that are central to personality and developmental research Contributors to this volume explore the methodology and scope of life span studies in a variety of contexts including intellectual and cognitive development transitions such as that from childhood to early adult life social mobility behavioral genetics and psychological disorder particularly depression It is a valuable reference for a wide range of researchers in developmental psychology social and behavioral science psychiatry epidemiology and statistics The Developmental Psychopathology of Eating Disorders Linda Smolak, Ruth H. Striegel-Moore, Michael P. Levine, 2013-01-11 Although eating problems ranging from body dissatisfaction and dieting to anorexia nervosa or bulimia nervosa can begin and typically have their roots in childhood theory and research in developmental psychopathology and developmental psychology have not received substantial attention in eating disorders research This book provides crucial background material from both fields and then makes direct applications to numerous aspects of the field of eating disorders including theory research treatment and primary prevention This book was born out of a transaction between frustration and optimism The frustrations reflected the limitations of current knowledge about eating problems and disorders Etiological causes which are sensitive and specific to eating disorders have been elusive Although there is some understanding of risk factors little is known about protective factors This has made prevention among other things difficult Furthermore the mechanisms underlying the association between risk factors and disordered eating are poorly understood For example it is known that women are at greater risk than men are but clinicians are hard pressed to get beyond gender based speculations and demonstrate why this is true The optimism grows from familiarity with the field of developmental psychopathology It seems evident that this approach has much to offer the field of eating disorders This book is an early step in the integration of developmental psychopathology into theorizing research treatment and prevention of eating disorders It addresses four specific goals to introduce the principles and methodologies of developmental psychopathology to review the work of developmental psychologists in several major areas of behavior relevant to understanding the causes treatment and prevention of eating disorders to apply developmental psychopathology principles to the area of eating disorders both in the form of theoretical models and in specific areas issues raised by developmental psychopathology and to discuss the implications of developmental approaches for prevention programs and treatments **International Handbook of Personality and Intelligence** Donald H.
