For the Love of Teaching, by Brent Kilbourn, 1998. Althouse Press, University of Western Ontario, London, Ontario, Canada. xiii + 206 pp. ISBN 0-920354-45-9.

In *For the Love of Teaching*, Brent Kilbourn offers a pair of stories about science teaching that demonstrate that everyday teaching acts are highly complex yet still largely comprehensible. The focus of the book is on striving for pedagogical excellence achieved through a thoughtful mastery of the subtleties of teaching, even at its most mundane. It is, therefore, a book that offers insights to those who strive to improve science education in everyday acts of teaching.

By using narratives to explore these complexities, Kilbourn displays ideas about teaching in relation to the motives of the characters, including himself, demonstrating that not all that is important in teaching is exclusively rational. In this way the book is also an invitation to subjective reflection on the part of teachers, and in its form it presents a strong argument that the act of reflection is as valuable for professional growth as are the insights one might achieve.

In the first section, the reader sits in as Kilbourn puzzles through his role as parent-and-teacher during his daughter's turn at that ubiquitous childhood experience, the grade school science fair project. In the telling given in the book, Kilbourn reviews his thoughts, actions, and notes made during the project, and asks himself repeatedly, "Why did I do that?" Kilbourn organizes his responses into a variety of "families" of principles that he says guided his work with his daughter. For example, the principles he groups within the "Technique" family include *duration*, *momentum*, *timing*, and *closure*. Another, "Student Enjoyment," includes *results*, *ownership*, *appearance*, and *accomplishment*. A thought-provoking outline of guiding principles emerges, illustrated by the specific episodes from the development of the science fair project.

An academically inclined reader may question the lack of developed references to literature that might have situated the principles in pedagogy generally, or science education specifically. Kilbourn offers shy references to Dewey, Eisner, and van Maanen, and speaks briefly in the voices of Schön, Scheffler, Kagan, and a few others, engaging them just enough for the reader to know that he generally goes along with what they say. Where he gives somewhat more attention to other authors, it is limited to the end of his more analytical sections, entitled "Morality" and "Aesthetics." Thus, the division in which he outlines the principles is set outside of any ongoing discourse in science education. Are there not others that have had some things to say that relate to his principles? Probably, and Kilbourn surely knows this, but he remains silent here.

This silence regarding related work could be taken, however, not as a flaw, but as a way of giving the reader an incentive to engage with his work critically. By not making explicit reference to outside experts, Kilbourn's work is implicitly suggesting that one's own judgment about teaching has inherent value. This is an empowering stance to take. It

Problems Of Meaning In Science Curriculum:

Problems of Meaning in Science Curriculum Douglas A. Roberts, Leif Östman, 1998-01-01 This collection of analytical essays from 13 internationally renowned scholars and activists is about the selection production and expression of meaning offered to students by the curriculum in school science Examples for analysis are drawn from sources that include policy debates textbooks classroom discourse and such recent efforts at science curriculum renewal as the U S National Science Education Standards

The Re-emergence of Values in Science Education Deborah Corrigan, Justin Dillon, Richard Gunstone, 2007 Issues relating to values have always had a place in the school science curriculum Sometimes this has been only in terms of the inclusion of topics such as the nature of science and or scientific method and or particular intentions for laboratory work that relate to scientific method sometimes it has been much broader for example in curricula with STS emphases Of importance to aspects of this proposal is that different countries cultures have had different traditions in terms of the place of values in the school science curriculum One obvious very broad difference of this form is the central place in science education thinking in many European countries of *bildung* and the complete absence of this construct from most science curriculum thinking in English speaking contexts There are numbers of such country cultural differences In the 1990s many countries moved towards various conceptualizations of Outcomes Based Education OBE sometimes so labelled and sometimes not It was usual but not universal for OBE focused science curricula to have constrained views of the values that should be implicit and explicit in curriculum that is views concerned only with the nature of science and scientific method both usually seen as quite unproblematic Currently there are a number of education systems that are changing again and choosing to move away from Outcomes Based Education for example South Africa and several Australian states One of the most interesting features of many of these movements is the re embracing of a wider view of the science curriculum including a reconsideration of the nature and place of the values associated with science in the purposes for and approaches to science education

Rethinking Science Education Roland M. Schulz, 2014-08-01 This book presents a philosophy of science education as a research field as well as its value for curriculum instruction and teacher pedagogy It seeks to re think science education as an educational endeavour by examining why past reform efforts have been only partially successful including why the fundamental goal of achieving scientific literacy after several reform waves has proven to be so elusive The identity of such a philosophy is first defined in relation to the fields of philosophy philosophy of science and philosophy of education It argues that educational theory can support teacher s pedagogical content knowledge and that history philosophy and sociology of science should inform and influence pedagogy Some case studies are provided which examine the nature of science and the nature of language to illustrate why and how a philosophy of science education contributes to science education reform It seeks to contribute in general to the improvement of curriculum design and science teacher education The perspective to be taken on board is that to teach science is to have a philosophical frame of mind about the subject about

education about one's personal teacher identity *Science Education Research and Practice in Europe* Doris Jorde, Justin Dillon, 2012-12-17 Each volume in the 7 volume series *The World of Science Education* reviews research in a key region of the world. These regions include North America, South and Latin America, Asia, Australia and New Zealand, Europe, Arab States and Sub-Saharan Africa. The focus of this Handbook is on science education in Europe. In producing this volume, the editors have invited a range of authors to describe their research in the context of developments in the continent and further afield. In reading this book, you are invited to consider the historical, social and political contexts that have driven developments in science education research over the years. A unique feature of science education in Europe is the impact of the European Union on research and development over many years. A growing number of multi-national projects have contributed to the establishment of a community of researchers increasingly accepting of methodological diversity. That is not to say that Europe is moving towards homogeneity as this volume clearly shows.

Children's Rights: New Issues, New Themes, New Perspectives Michael Freeman, 2018-02-27 This collection of essays by a variety of scholars compiled to celebrate the silver anniversary of *The International Journal of Children's Rights* builds on work already in the literature to reveal where we are now at and how the law concerned with children is reacting to new developments. New or relatively new subject matter is explored such as film classification, intersex, genital mutilation, the right to development. Rights within the context of sport are given an airing. We are offered new perspectives on discipline, on the significance of rights flowing downhill on the so-called General Principles. The uses to which the CRC is put in legal reasoning in some legal systems is critically examined. Though not intended as an audit, the collection offers a fascinating image of where the field of children's rights is at now, the progress that has been made and what issues will require work in the future.

Environmental and Sustainability Education Policy Katrien Van Poeck, Jonas A. Lysgaard, Alan Reid, 2018-12-07 This timely collection surveys and critiques studies of environmental and sustainability education (ESE) policy since the mid 1990s. The volume draws on a wide range of policy studies and syntheses to provide readers with insights into the international genealogy and priorities of ESE policy. Editors and contributors call for renewed attention to the possibilities for future directions in light of previously published work and innovations in scholarship. They also offer critical commentary on the evolution of research trends, approaches and findings. Including a wide range of examples of ESE policy and policy research, the book draws on studies of educational initiatives and legislation, policy making processes and rhetoric, ideological orthodoxy and critique, curriculum making and educational theory, globalisation and neoliberalism, climate change and environmental worldviews and much more. In addition, introductory commentary from the editors traces how ESE researchers have dealt with key trends, complexities and issues in the policy practice research nexus both conceptually and empirically. Throughout the collection, contributions illustrate how researchers might reimagine and reinvigorate policy research on ESE, including how working with other fields and diverse perspectives, ideas and expertise will aid the cross-fertilisation of a complex terrain of ideas, policy and practice.
