Structure-preserving Integrators in Nonlinear Structural Dynamics and Flexible Multibody Dynamics Peter Betsch, 2016-05-10 This book focuses on structure preserving numerical methods for flexible multibody dynamics including nonlinear elastodynamics and geometrically exact models for beams and shells It also deals with the newly emerging class of variational integrators as well as Lie group integrators It discusses two alternative approaches to the discretization in space of nonlinear beams and shells Firstly geometrically exact formulations which are typically used in the finite element community and secondly the absolute nodal coordinate formulation which is popular in the multibody dynamics community Concerning the discretization in time the energy momentum method and its energy decaying variants are discussed It also addresses a number of issues that have arisen in the wake of the structure preserving discretization in space Among them are the parameterization of finite rotations the incorporation of algebraic constraints and the computer implementation of the various numerical methods The practical application of structure preserving methods is illustrated by a number of examples dealing with among others nonlinear beams and shells large deformation problems long term simulations and coupled thermo mechanical multibody systems In addition it links novel time integration methods to frequently used methods in industrial multibody system simulation
