Howard H. Liebermann, 1993-05-20 This volume details the principles underlying rapid solidification processing material structure and properties and their applications This practical resource presents a manifold approach to both amorphous and crystalline rapidly solidified metallic alloys Written by over 30 internationally acclaimed specialists in their respective fields  
Rapi      *Magnesium Alloys and Technologies* Karl U. Kainer, 2006-03-06 The need for light weight materials especially in the automobile industry created renewed interest in innovative applications of magnesium materials This demand has resulted in increased research and development activity in companies and research institutes in order to achieve an improved property profile and better choice of alloy systems Here development trends and application potential in different fields like the automotive industry and communication technology are discussed in an interdisciplinary framework      Laser Processing: Surface Treatment and Film Deposition J. Mazumder, O. Conde, R. Vilar, W. Steen, 2012-12-06 Synthesis of nonequilibrium metallic phases has been an area of great interest to the materials processing community since early 1960 Inherent rapid cooling rates in laser processing are being used to engineer non equilibrium microstructures which cannot be rivaled by other processes This lecture will discuss the phenomena involved and its application in designing materials with tailored properties What is non equilibrium Synthesis This is a synthesis method to produce binary or higher order materials where kinetics of the process affects the transport of the constituent elements during phase transformation resulting in a composition or crystallographic configuration which is different from what is observed when the elements arrange themselves with the lowest possible Gibbs Free energy which is the equilibrium condition Figure 1 illustrates the phenomena Phase diagram under equilibrium condition is illustrated by the solid line whereas the non equilibrium phase diagram is represented by the dotted line One can observe the shrinkage of the phase field under non equilibrium condition Any alloy composition between the solidus lines of the equilibrium and non equilibrium phase diagram will be a non equilibrium alloy with extended solid solution      Rapidly Quenched Metals 6: Volume 2 R.W.
