Economic and Financial Justification of Advanced Manufacturing Technologies Hamid R. Parsaei, W.G. Sullivan, T.R. Hanley, 2013-10-22 Competence in investment analysis is now a basic requirement for most practicing managers engineers and financial analysts in order to avoid possible serious

mistakes arising from flawed or inadequate knowledge of the discipline Furthermore individuals who make decisions based on technical economics stake their professional futures in many cases on the accuracy of such evaluations The aim of this volume is to provide a balanced view of the essential components of economic and financial analysis including 1 Strategic and design issues 2 Principles of cost management systems and activity based costing and 3 Tools for developing the financial measures of investment worth with advanced topics and case studies in these three areas This volume provides a refreshing insight into the various methods that engineers managers and financial analysts may need to consider to find good alternatives for the investment of scarce resources Not only are new ventures presented but also improvements within existing facilities that include process modification product design equipment replacement and plant expansion contraction

Integrated Discrete Production Control Lucas Pun,1992 Integrated Discrete Production systems are a new concept which are proving vital in aiding integrated discrete production activities to achieve their optimum efficiency This book has been written primarily to establish methods for solving analysis and synthesis problems which arise in the progressive integration of intelligent discrete production controls in modern manufacturing and to provide useful theories covering such integrated controls Topics reviewed include industrial artificial intelligence systems IAIS their range of possible applications analyses of the problems they are designed to solve and the methods by which they can be created Various aspects of IAIS which may be either completely automated systems such as robots or decision aid systems such as computer aided design systems are discussed The many facets of creating a successful IAIS include knowledge of automation techniques control theory and skill in artificial intelligence techniques particularly the transformation of automatic control or decision aid processes into computational processes At present these skills are usually found in different people this volume shows how the various skills can be combined to create a compact IAIS that answers current needs The work is intended for engineers interested in the field whose background may be mechanical industrial electronic or control engineering or computing And secondly to teachers offering research level lectures who can use the book to construct a course on Integrated Discrete Production Control

Production Planning with Capacitated Resources and Congestion Hubert Missbauer,Reha Uzsoy,2020-02-26 This book presents a comprehensive overview of recent developments in production planning The monograph begins with an introductory chapter reviewing the need for these production planning models that operate by determining time phased releases of work into the facility or supply chain relating these to the Manufacturing Planning and Control MPC and Advanced Planning and Scheduling APS frameworks that form the basis of most academic research and industrial practice The extensive body of work on Workload Control is also placed in this context and proves the need for improved models with a discussion of the difficulties these approaches encounter The next two chapters present a detailed review of the state of the art in optimization models based on exogenous planned lead times and examines the cases where these can take both integer and fractional values The difficulties arising in estimating planned lead times are consistent with factory behavior which are

highlighted noting that many of these lead to non convex optimization models Attempts to address these difficulties by iterative multimodel approaches that combine simulation and mathematical programming are also discussed in detail The next three chapters of the volume address the set of techniques developed using clearing functions which represent the expected output of a resource in a planning period as a function of the expected workload of the resource during that period The chapters on this subject propose a basic optimization model for multiple products discuss the difficulties of this model and some possible solutions It also reviews prior work and discuss a number of alternative formulations of the clearing function concept with their respective advantages and disadvantages Applications to lot sizing decisions and a number of other specific problems are also described This volume concludes with an assessment of the state of the art described in the volume and several directions for future work

Advances in Manufacturing Systems Raj S. Sodhi, 1994 The topics covered in this volume fall into five main areas manufacturing systems design modelling and analysis for productivity enhancement manufacturing scheduling and control robotics design and manufacturing applications

Proceedings of the International Conference on Just-in-Time Manufacturing Systems Ahmet Şatır, 1991 The papers in this volume bring together the expertise of practitioners and researchers in various methodological and implementation issues on Just in Time Manufacturing Systems JITMS New strategic and tactical tools of manufacturing management are reviewed These tools are proving to be of vital importance for the viability and advancement of manufacturing enterprises in a continually changing and increasingly competitive business environment The proceedings will provide a useful reference on the implications of new technologies in the planning and shaping of work as well as helping to promote productivity and competitiveness in business enterprises
