Processes Of The World System:

Space and Transport in the World-System Stephen G. Bunker, Paul S. Ciccantell, 1998-02-28 Key metaphors in world system analysis are profoundly spatial but there have been few attempts to understand how space location and topography affect world system organization and process To fill this gap this book examines case studies of the restructuring of space and transport in core semiperipheral and peripheral economies It addresses such topics as the role of ocean transport in linking terrestrially based units of the capitalist world economy the role of land transport systems in the construction and restructuring of relationships between raw materials peripheries and core economies and the role of the airplane in transforming and representing changing spatial economic and social relations in the capitalist world economy World systems theory and many other perspectives on the world economy including international political economy and analysis of globalization typically pay only limited attention to issues of space location and the role of transportation in the world economy This book identifies key theoretical and empirical issues and provides the basis for formulating research strategies to address this gap in our understanding

Routledge Handbook of World-Systems Analysis Salvatore Babones, Christopher Chase-Dunn, 2012-05-31 World systems analysis has developed rapidly over the past thirty years Today's students and junior scholars come to world systems analysis as a well established approach spanning all of the social sciences The best world systems scholarship however is spread across multiple methodologies and more than half a dozen academic disciplines Aiming to crystallize forty years of progress and lay the groundwork for the continued development of the field the Handbook of World Systems Analysis is a comprehensive review of the state of the field of world systems analysis since its origins almost forty years ago The Handbook includes contributions from a global interdisciplinary group of more than eighty world systems scholars The authors include founders of the field mid career scholars and newly emerging voices Each one presents a snapshot of an area of world systems analysis as it exists today and presents a vision for the future The clear style and broad scope of the Handbook will make it essential reading for students and scholars of anthropology archaeology geography political science history sociology and development economics

A World-Systems Reader Thomas D. Hall, 2000-03-01 This book brings together some of the most influential new research from the world systems perspective The authors survey and analyze new and emerging topics from a wide range of disciplinary perspectives from political science to archaeology Each analytical essay is written in accessible language so that the volume serves as a lucid introduction both to the tradition of world systems thought and the new debates that are sparking further research today

The African Transformation of Western Medicine and the Dynamics of Global Cultural Exchange David Baronov, 2010-05-14 Beginning with the colonial era Western biomedicine has radically transformed African medical beliefs and practices Conversely in using Western biomedicine Africans have also transformed it The African Transformation of Western Medicine and the Dynamics of Global Cultural Exchange contends that contemporary African medical systems no less biomedical than Western medicine in fact

greatly enrich and expand the notion of biomedicine reframing it as a global cultural form deployed across global networks of cultural exchange The book analyzes biomedicine as a complex and dynamic sociocultural form the conceptual premises of which make it necessarily subject to ongoing change and development as it travels the globe David Baronov captures the complexities of this cultural exchange by using world systems analysis in a way that places global cultural processes on equal footing with political and economic processes In doing so he both allows the story of Africa s transformation of Western biomedicine to be told and offers new insights into the capitalist world system Globalization as Evolutionary Process

George Modelski,Tessaleno Devezas,William R. Thompson,2007-12-20 The term globalization has gained widespread popularity yet most treatments are either descriptive and or focused on changes in economic interconnectivity In this volume the concept is seen in broader terms as leading international experts from a range of disciplines develop a long term analysis to address the problems of globalization The editors and contributors develop a framework for understanding the origins and trajectory of contemporary world trends constructing testable and verifiable models of globalization They demonstrate how the evolutionary approach allows us to view globalization as an enterprise of the human species as a whole focusing on the analytical problem of global change and the rules governing those changes The emphasis is not on broad based accounts of the course of world affairs but selectively on processes that reshape the social of the human species the making of world opinion and the innovations that animate these developments Chapters are clustered into four foci One emphasizes the interpretation of globalization as an explicitly evolutionary process A second looks at historical sequences of such phenomena as population growth or imperial rise and decline as processes that can be modeled and not purely described The third cluster examines ongoing changes in economic processes especially information technology A final cluster takes on some of the challenges associated with forecasting and simulating the complexities of globalization processes This innovative and important volume will be of interest to students and scholars across the social sciences concerned with the phenomenon of globalization

A Companion to Ethnicity in the Ancient Mediterranean Jeremy McInerney,2014-08-25 A Companion to Ethnicity in the Ancient Mediterranean presents a comprehensive collection of essays contributed by Classical Studies scholars that explore questions relating to ethnicity in the ancient Mediterranean world Covers topics of ethnicity in civilizations ranging from ancient Egypt and Israel to Greece and Rome and into Late Antiquity Features cutting edge research on ethnicity relating to Philistine Etruscan and Phoenician identities Reveals the explicit relationships between ancient and modern ethnicities Introduces an interpretation of ethnicity as an active component of social identity Represents a fundamental questioning of formally accepted and fixed categories in the field Earth System Governance Frank Biermann,2014-11-28 A new model for effective global environmental governance in an era of human caused planetary transformation and disruption Humans are no longer spectators who need to adapt to their natural environment Our impact on the earth has caused changes that are outside the range of natural variability and are equivalent to such major geological

disruptions as ice ages Some scientists argue that we have entered a new epoch in planetary history the Anthropocene In such an era of planet wide transformation we need a new model for planet wide environmental politics In this book Frank Biermann proposes earth system governance as just such a new paradigm Biermann offers both analytical and normative perspectives He provides detailed analysis of global environmental politics in terms of five dimensions of effective governance agency particularly agency beyond that of state actors architecture of governance from local to global levels accountability and legitimacy equitable allocation of resources and adaptiveness of governance systems Biermann goes on to offer a wide range of policy proposals for future environmental governance and a revitalized United Nations including the establishment of a World Environment Organization and a UN Sustainable Development Council new mechanisms for strengthened representation of civil society and scientists in global decision making innovative systems of qualified majority voting in multilateral negotiations and novel institutions to protect those impacted by global change Drawing on ten years of research Biermann formulates earth system governance as an empirical reality and a political necessity **Unifying**
