Hughes, 2021-12-24 This title the 52nd in symposium series presents a comprehensive review of apoptosis and features contributions from many internationally recognised authors The book is the first to integrate programmed cell death in plants invertebrates and vertebrates Rapid publication ensures that the very latest research is included *Programmed Cell Death in Animals and Plants* John Bryant, Jeff Garland, S.G. Hughes, 2021-12-24 This title the 52nd in symposium series presents a comprehensive review of apoptosis and features contributions from many internationally recognised authors The book is the first to integrate programmed cell death in plants invertebrates and vertebrates Rapid publication ensures that the very latest research is included *Programmed Cell Death in Plants and Animals* Josephine Rice, 2016 Both autophagy and programmed cell death PCD are fundamental processes of cellular maintenance that are closely interrelated in plant and animal cells under physiological and stressful conditions Differentiation immune response lack of nutrients and wide range of abiotic factors induce their development and realization of survival or cell death scenario Microtubular cytoskeleton is known as one of the principle players in the mediation of PCD autophagic signals Chapter One in this book presents an overview of the current knowledge about the role of MTs in PCD and autophagy related processes in plants Chapter Two reviews the mechanisms and consequences of virus interactions with the host cell death machinery to help understand potentially pathologically relevant consequences that will help in the design of intervention strategies and the development of antiviral therapies The final chapter discusses the control of the levels of different reactive oxygen species ROS and their interaction with hormones and transcriptional factors in relation with programmed cell death in leaves Plant Programmed Cell Death Arunika N. Gunawardena, Paul F. McCabe, 2015-10-08 Programmed cell death PCD is a genetically encoded active process which results in the death of individual cells tissues or whole organs PCD plays an essential role in plant development and defense and occurs throughout a plant's lifecycle from the death of the embryonic suspensor to leaf and floral organ senescence In plant biology PCD is a relatively new research area however as its fundamental importance is further recognized publications in the area are beginning to increase significantly The field currently has few foundational reference books and there is a critical need for books that summarize recent findings in this important area This book contains chapters written by several of the world's leading researchers in PCD This book will be invaluable for PhD or graduate students or for scientists and researchers entering the field Established researchers will also find this timely work useful as an up to date overview of this fascinating research area **Programmed Cell Death in Plants** John Gray, 2004 For the first time in a single volume researchers from seven countries review new knowledge and studies on programmed cell death PCD as it applies to plants and draw comparisons with systems in animals and unicellular organisms Chapters cover the major pathways of PCD in plants and animals describe the cell death events in reproductive and vegetative tissues outline examples of PCD in response

to abiotic and biotic stress and present future applications and methods Programmed Cell Death in Plants serves as the source of ideas for the development of new research strategies and model systems regarding the phenomenon of PCD in plants

Noodén, 2004 Programmed cell death is a common pattern of growth and development in both animals and plants However programmed cell death and related processes are not as generally recognized as central to plant growth This is changing fast and is becoming more of a focus of intensive research This edited work will bring under one cover recent reviews of programmed cell death apoptosis and senescence Summaries of the myriad aspects of cell death in plants Discussion of the broadest implications of these disparate results A unification of fields where there has been no cross talk Enables easy entry into diverse but related lines of research

**Handbook of Plant Science** Keith Roberts, 2007-12-10 Plant Science like the biological sciences in general has undergone seismic shifts in the last thirty or so years Of course science is always changing and metamorphosing but these shifts have meant that modern plant science has moved away from its previous more agricultural and botanical context to become a core biological discipline in its own right However the sheer amount of information that is accumulating about plant science and the difficulty of grasping it all understanding it and evaluating it intelligently has never been harder for the new generation of plant scientists or for that matter established scientists And that is precisely why this Handbook of Plant Science has been put together Discover modern molecular plant sciences as they link traditional disciplines Derived from the acclaimed Encyclopedia of Life Sciences Thorough reference of up to the minute

reliable self contained peer reviewed articles cross referenced throughout Contains 255 articles and 48 full colour pages written by top scientists in each field The Handbook of Plant Science is an authoritative source of up to date practical information for all teachers students and researchers working in the field of plant science botany plant biotechnology agriculture and horticulture     An Introduction to Cell and Molecular Biology Stephen L. Wolfe,1995 This text offers a balanced and integrated treatment of molecular biology cell biology and biochemistry and covers all topics as Wolfe s large book only in less detail     *New Developments in Cell Apoptosis Research* Alan J. Corvin,2007 Apoptosis is the regulated form of cell death It is a complex process defined by a set of characteristic morphological and biochemical features that involves the active participation of affected cells in a self destruction cascade This programmed cell death plays a critical role in physiological functions such as cell deletion during embryonic development balancing cell number in continuously renewing tissues and immune system development Additionally a dysregulation of apoptosis is underlying in numerous pathological situations such as Parkinson Alzheimer s disease and cancer fruits and vegetables and certain beverages such as tea and wine which are rich in polyphenols with reduced risk of chronic diseases including cancer Apoptosis is also the regulatory mechanism involved in the removal of unnecessary cells during development and in tissue homeostasis in a wide range of organisms from insects to mammals The aim of this book is to provide new studies in the field of apoptosis research
