

# The 16:8 Approach to Intermittent Fasting

## What is 16:8 fasting?

Every day, you fast for 16 hours, then eat within an 8-hour window.

For example...

## Fast between 8 pm and 12 noon

You can have water, or coffee and tea (with no milk or sugar).

## Eat between 12 noon and 8 pm

You can have anything you want (though healthy foods are encouraged) without counting calories or macros.

**Advanced Personal Training** Paul Hough, Brad Schoenfeld, 2021-11-14 Effective fitness instruction and training programme design require an exercise specialist trainer to combine professional experience with strategies underpinned by scientific evidence. This book allows readers to develop their understanding of the scientific rationale behind important components of personal training such as monitoring fitness and training programme design. Each chapter synthesizes the findings of cutting edge scientific research to identify optimum training methods and dispel some myths that are prevalent in the fitness industry. The chapters within this new edition have been written by internationally renowned experts from several disciplines including strength and conditioning physiology, psychology and nutrition. Contributions have also been made from esteemed academics who have conducted some of the scientific studies discussed within the book. The authors have interpreted and summarised the scientific evidence and produced evidence based recommendations allowing readers to explore the latest concepts and research findings and apply them in practice. The book includes several new chapters such as evidenced based practice (EBP) and designing training programmes for female clients. This second edition remains the essential text for fitness instructors, personal trainers and sport and exercise students. The book provides an invaluable resource for fitness courses, exercise science degree programmes and continued professional development for exercise professionals.

*High Intensity Functional Training* Amy M. West, 2025-08-22 High Intensity Functional Training: Clinical Applications in Training, Rehabilitation and Sport presents a clear definition of high intensity functional training (HIFT) in medical literature while also examining how HIFT can be used as an exercise training modality, a rehabilitation protocol and as a competitive sport unto itself. Topics covered move from the data in the research to the implications for specific patients and rehabilitation outcomes. Chapter authors are all subject matter experts, some of whom have designed and implemented studies regarding this training modality. This comprehensive book provides a solution on training and the sport and how to best care for these athletes. Presents how high intensity functional training (HIFT) is different than traditional strength and conditioning. Shows how HIFT can be used in special populations and not only in elite athletes. Written by experts in the sports medicine field.
