**Probabilistic Modeling in Bioinformatics and Medical Informatics** Dirk

Husmeier, Richard Dybowski, Stephen Roberts, 2006-05-06 Probabilistic Modelling in Bioinformatics and Medical Informatics has been written for researchers and students in statistics machine learning and the biological sciences The first part of this book provides a self contained introduction to the methodology of Bayesian networks The following parts demonstrate how these methods are applied in bioinformatics and medical informatics All three fields the methodology of probabilistic modeling bioinformatics and medical informatics are evolving very quickly The text should therefore be seen as an introduction offering both elementary tutorials as well as more advanced applications and case studies

*Handbook of Statistical Systems Biology* Michael Stumpf, David J. Balding, Mark Girolami, 2011-09-09 Systems Biology is now entering a mature phase in which the key issues are characterising uncertainty and stochastic effects in mathematical models of biological systems The area is moving towards a full statistical analysis and probabilistic reasoning over the inferences that can be made from mathematical models This handbook presents a comprehensive guide to the discipline for practitioners and educators in providing a full and detailed treatment of these important and emerging subjects Leading experts in systems biology and statistics have come together to provide insight in to the major ideas in the field and in particular methods of specifying and fitting models and estimating the unknown parameters This book Provides a comprehensive account of inference techniques in systems biology Introduces classical and Bayesian statistical methods for complex systems Explores networks and graphical modeling as well as a wide range of statistical models for dynamical systems Discusses various applications for statistical systems biology such as gene regulation and signal transduction Features statistical data analysis on numerous technologies including metabolic and transcriptomic technologies Presents an in depth presentation of reverse engineering approaches Provides colour illustrations to explain key concepts This handbook will be a key resource for researchers practising systems biology and those requiring a comprehensive overview of this important field

**Statistical Modelling of Molecular Descriptors in QSAR/QSPR** Matthias Dehmer, Kurt Varma, Danail Bonchev, 2012-09-13 This handbook and ready reference presents a combination of statistical information theoretic and data analysis methods to meet the challenge of designing empirical models involving molecular descriptors within bioinformatics The topics range from investigating information processing in chemical and biological networks to studying statistical and information theoretic techniques for analyzing chemical structures to employing data analysis and machine learning techniques for QSAR QSPR The high profile international author and editor team ensures excellent coverage of the topic making this a must have for
