the Protection of Museum Collections from Earthquake Damage Jerry Podany,J. Paul Getty Museum,2008 For nearly three decades the J Paul Getty Museum has played a leading role in the development of seismic mitigation for museum collections Contributors to this volume ranging from museum conservators mount makers and historical archaeologists to seismologists and structural engineers discuss and illustrate a wide variety of earthquake mitigation efforts for collections from the simple and inexpensive to the complex and costly The book s essays examine the techniques applied to large collections and to small house museums to exhibition cases containing objects as well as to monumental works of art and historical structures Approaches range from securing and restraining objects to decoupling them from the ground through a variety of base isolation mechanisms These pioneering efforts have been developed in the face of significant challenges since as any engineer conservator or mount maker who has undertaken this work can attest a small sculpture can often be a far greater challenge to protect than a multistory building **Transactions on Computational Systems Biology VI** Gordon

Plotkin,2006-11-17 The 5th Transactions on Computational Systems Biology volume edited by Gordon Plotkin features carefully selected and enhanced contributions initially presented at the 2005 IEEE International Conference on Granular Computing The 9 papers selected for this special issue discuss various aspects of computational methods algorithm and techniques in bioinformatics such as gene expression analysis biomedical literature mining and natural language processing protein structure prediction biological database management and biomedical information retrieval **Index of Conference**

Economics-Driven Software Architecture Ivan Mistrik, Rami Bahsoon, Rick Kazman, Yuanyuan Zhang, 2014-06-03 Economics driven Software Architecture presents a guide for engineers and architects who need to understand the economic impact of architecture design decisions the long term and strategic viability cost effectiveness and sustainability of applications and systems Economics driven software development can increase quality productivity and profitability but comprehensive knowledge is needed to understand the architectural challenges involved in dealing with the development of large architecturally challenging systems in an economic way This book covers how to apply economic considerations during the software architecting activities of a project Architecture centric approaches to development and systematic evolution where managing complexity cost reduction risk mitigation evolvability strategic planning and long term value creation are among the major drivers for

adopting such approaches It assists the objective assessment of the lifetime costs and benefits of evolving systems and the identification of legacy situations where architecture or a component is indispensable but can no longer be evolved to meet changing needs at economic cost Such consideration will form the scientific foundation for reasoning about the economics of nonfunctional requirements in the context of architectures and architecting Familiarizes readers with essential considerations in economic informed and value driven software design and analysis Introduces techniques for making value based software architecting decisions Provides readers a better understanding of the methods of economics driven architecting
