Radiative Processes in Discharge Plasmas Joseph M. Proud, Lawrence H. Luessen, 2014-01-15 *Radiative Processes in Discharge Plasmas* Joseph M. Proud, Lawrence H. Luessen, 2013-06-29 An Advanced Study Institute on Radiative Processes in Discharge Plasmas was held at the Atholl Palace Hotel Pitlochry Perthshire Scotland June 23 through July 5 1985 This publication is the Proceedings from that Institute The Institute was attended by eighty five Participants and Lecturers representing the United States Canada France West Germany Greece The Netherlands Portugal Turkey the United Kingdom and Switzerland A distinguished faculty of eighteen Lecturers was assembled and the topical program organized with the assistance of an Advisory Committee composed of Dr John Waymouth USA Dr Timm Teich Switzerland Dr Arthur Phelps USA Dr Nicol Peacock England Professor Erich Kunhardt USA Dr Anthony Hyder USA and Dr Arthur Guenther USA The underlying theme and objective of the Institute was the enhancement of scientific communication and exchange among academic industrial and national laboratory groups having a common concern for radiative processes in discharge plasmas The program was organized into four major sessions sequentially treating the fundamental science of visible and near visible radiation in plasmas the technology of discharge light sources recent and novel methods for the generation of plasmas and an update on advances in laser based diagnostics Each major session culminated in a panel discussion comprised of the Lecturers for that session **Plasma Science and the Environment** Wallace Manheimer, Linda E. Sugiyama, Thomas H. Stix, 1996-11-14 Written by some of the world's foremost experts the articles in this book show how plasma science can be applied to environmental problems including atmospheric sensing and modification energy conservation reduction of air pollution and processing of ordinary and radioactive wastes Atmospheric CFC's might be zapped with big lasers Urban air pollution could be removed by large convection towers built in or near cities And weapons grade plutonium can be destroyed with specially designed particle accelerators Some of the technologies described here are in use already while others are in the prototype stage or are speculative approaches deserving of further study Contents Written by some of the world's foremost experts the articles in this book show how plasma science can be applied to environmental problems including atmospheric sensing and modification energy conservation reduction of air pollution and processing of ordinary and radioactive wastes Atmospheric CFC's might be zapped with big lasers Urban air pollution could be removed by large convection towers built in or near cities And weapons grade plutonium can be destroyed with specially designed particle accelerators Some of the technologies described here are in use already while others are in the prototype stage or are speculative approaches deserving of further study *Atomic and Molecular Radiative Processes* Vladimir Krainov, Boris M. Smirnov, 2019-07-03 This book describes selected problems in contemporary spectroscopy in the context of quantum mechanics and statistical physics It focuses on elementary radiative processes involving atomic particles atoms molecules ions which include radiative transitions between discrete atomic states the photoionization of atoms photorecombination of

electrons and ions bremsstrahlung photodissociation of molecules and photoattachment of electrons to atoms In addition to these processes the transport of resonant radiation in atomic gases and propagation of infrared radiation in molecular gases are also considered The book subsequently addresses applied problems such as optical pumping cooling of gases via laser resonance radiation light induced drift of gas atoms photoresonant plasma reflection of radio waves from the ionosphere and detection of submillimeter radiation using Rydberg atoms Lastly topical examples in atmospheric and climate change science are presented such as lightning channel glowing emission of the solar photosphere and the greenhouse phenomenon in the atmospheres of the Earth and Venus Along with researchers both graduate and undergraduate students in atomic molecular and atmospheric physics will find this book a useful and timely guide [A Formulary for Plasma Physics](#) André Anders,1990
