Astrologia Gallica Book 24 Jean Baptiste Morin,2005-11 This book is an English translation of Book 24 of the *Astrologia Gallica* in which Morin explains the proper use of Transits to pinpoint the time when a predicted event will occur He first criticizes the various types of symbolic directions used by other astrologers of his day and then sets forth his own method of prediction with numerous examples The nature and time of an event in a person s life can be determined from his Natal Horoscope its Primary Directions Solar and Lunar Returns and their Primary Directions and concordant Transits By following the method that he sets forth it is sometimes possible to determine the exact Day when the event signified by a radical Primary Direction will occur Morin was a physician who became the most renowned of all French astrologers He was appointed Royal Mathematician to King Louis XIII and was summoned to be present at the birth of the royal heir the future King Louis XIV The present volume also contains example charts drawn for the actual times of significant events in the lives of a number of 17th century celebrities each chart is accompanied by a explanation of how the several factors combined to produce the events at the times shown The book closes with two chapters setting forth general instructions for determining the precise time of events and a final chapter with valuable rules for reading natal horoscopes James Herschel Holden is Research Director of the American Federation of Astrologers

Subject Index of the Modern Works Added to the British Museum Library British Museum. Department of Printed Books,1968 *Achieving Accuracy* Marshall William McMurran,2008-12-11 A Legacy of Computers and Missiles is an intensively researched photo enhanced discussion of digital computing and missile development in the Twentieth Century organized in two sections No matter what anyone has been told virtually all of the digital machines ever designed are binary deep down inside Number representations may have varied but the binary logic discussed here prevails After a bit of early history The Computing Section begins in earnest with Turing s Bombe used to decrypt Enigma traffic then investigates one by one digital systems from early room sized serial machines through the beginning of the modern parallel era ending with disgustingly parallel post 2000 Super computers Unlike most computing histories Achieving Accuracy deals in detail with military computing systems generally omitted for lack of definitive information Computer design and computer controlled missile guidance submarine navigation occupied some thirty years of the Author s professional career Achieving Accuracy s missile descriptions and discussions begin for weapon systems existing well before WW2 and cover virtually all US smart bombs cruise and ballistic missiles of that century Missile guidance systems have ranged from the V 1 s dead reckoning through

simple but jammable radio controlled to exceedingly complex self contained inertial guidance systems discussed at length The reader may be surprised to learn that a smart bomb flew in 1917 with several different models used in anger in WW2 The Minuteman III leg of the present Triad is described in detail along with a somewhat bizarre set of proposed basing plans for the Peacekeeper Missile that were precursors of the recently proposed Subway basing plan for MMIII Missile legacy includes a sub section necessarily less complete describing Soviet Russian missilery through 2000 noting that the early Soviet ballistic missile development was based almost entirely on the German V 2
